Deep DNA sequencing of tumor: ready for 'Prime Time' or not?

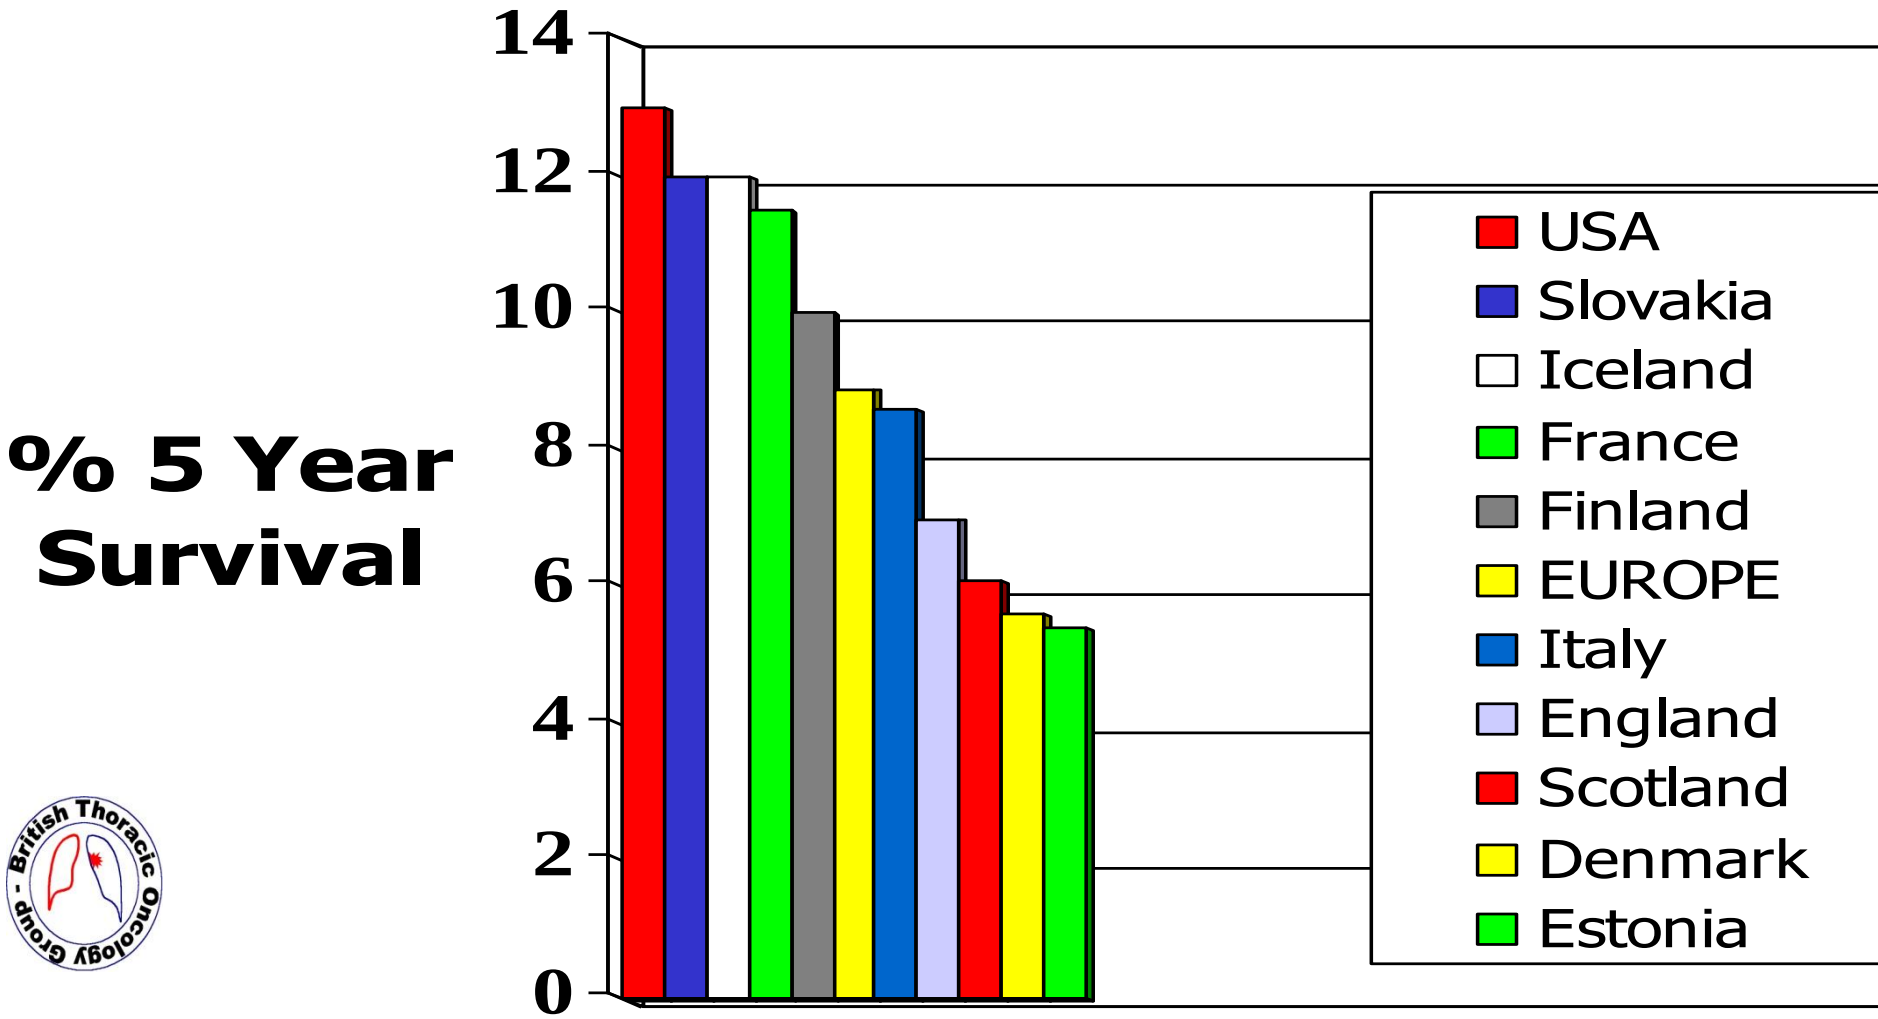
Prof Kenneth O'Byrne

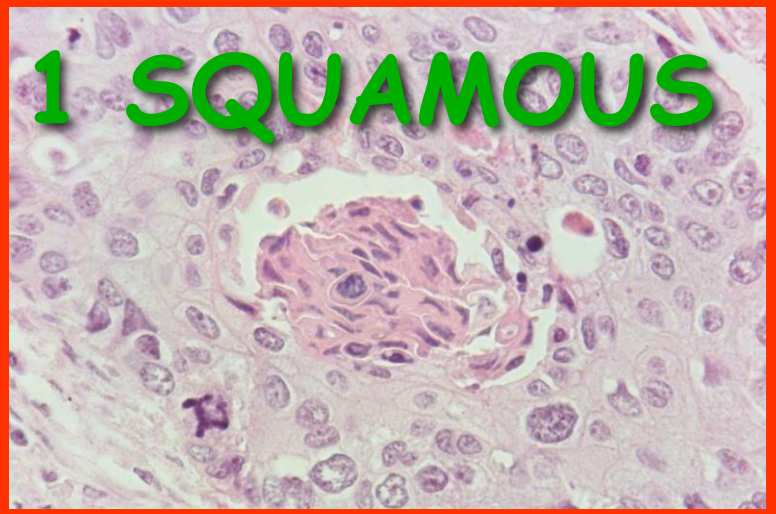
Thoracic Oncology Research Group, St James' Hospital and Trinity College, Dublin, Ireland

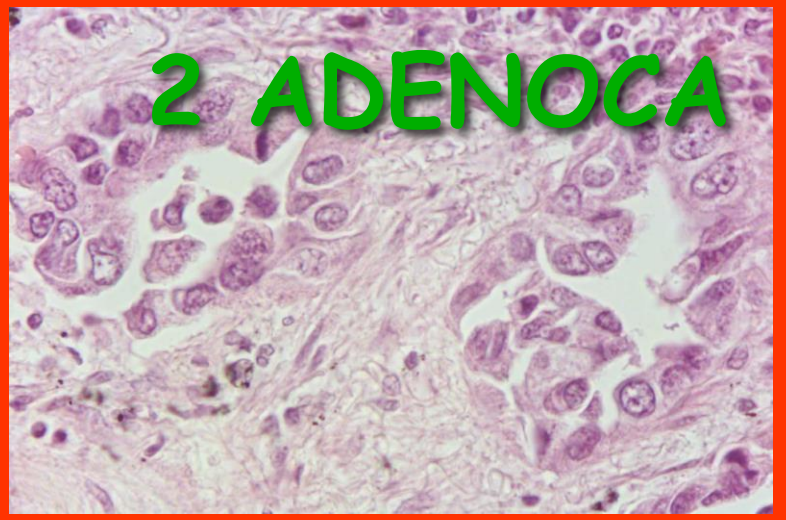
Disclosures

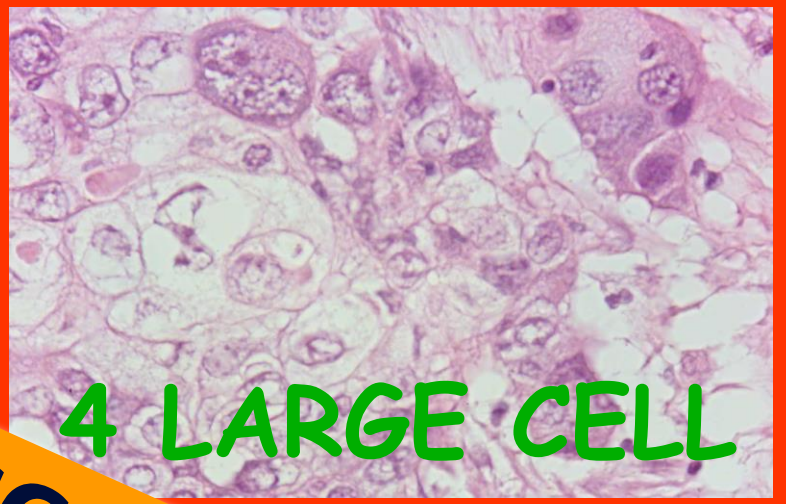
- I have worked as an advisor or speaker for the following companies
  - Pfizer
  - Boehringer Ingelheim
  - Lilly Oncology
  - Roche-Genentech
  - Merck Serono
  - Amgen
  - Clovis
  - Abbott Molecular
  - Novocure

Lung Cancer: Selected Comparative 5 year Survival: males



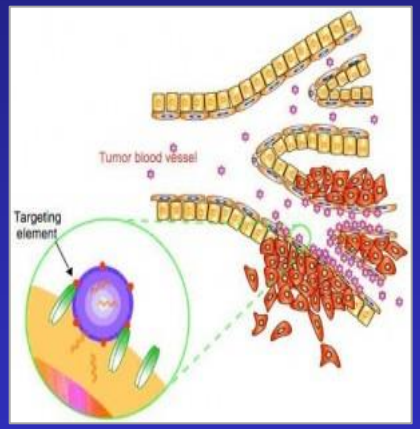


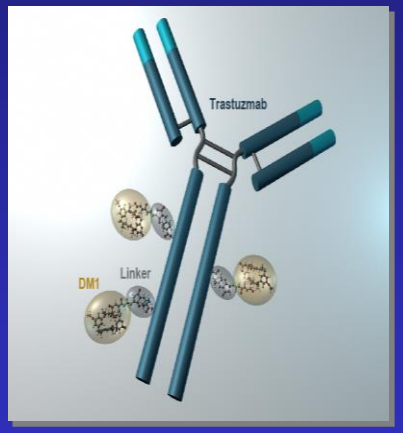




Few years ago: only SCLC vs NSCLC

How Does This Enable Personalized Medicine?

Right Target	Right Drug (or Combinations)	Right Patient
		




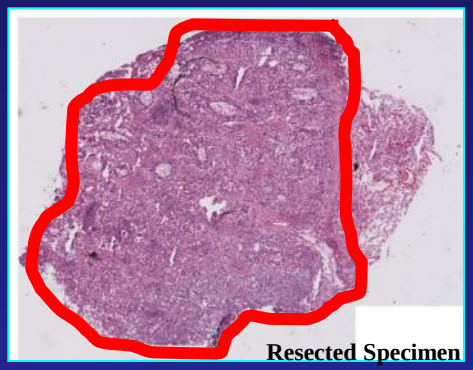
Genetic validation; Rare phenotypes	*Selective design and delivery; Combinations for complex diseases*	*Phenotyping and genotyping*

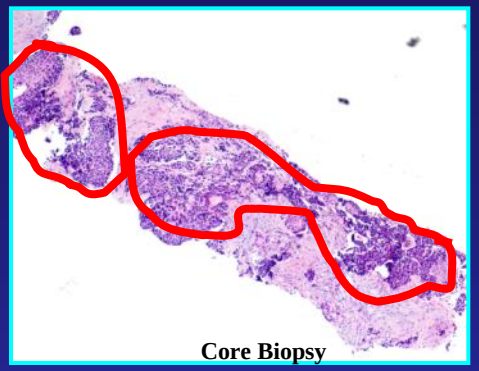
Sequencing technologies

- First generation sequencing technology
  - Sanger Sequencing
- Second generation sequencing technology
  - Roche - 454
  - Illumina – GA II
  - SOLiD
- Third gen sequencing technology
  - Helicose
  - PacBio
  - Illumina = HiSeQ, MiSeq
  - Ion Torrent
  - Oxford Nanopore

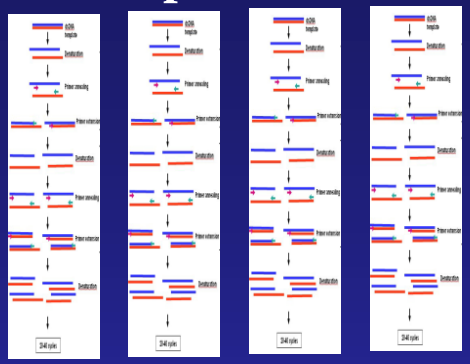
Multiplexed Mutation Assays

Tumor Tissue

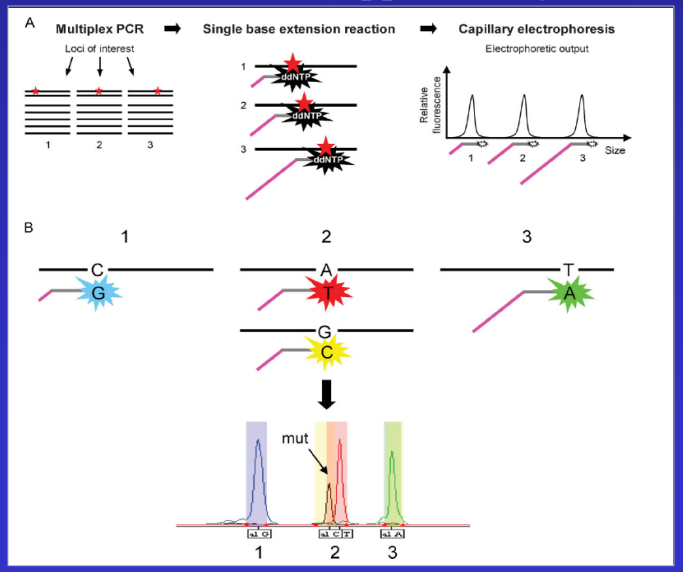




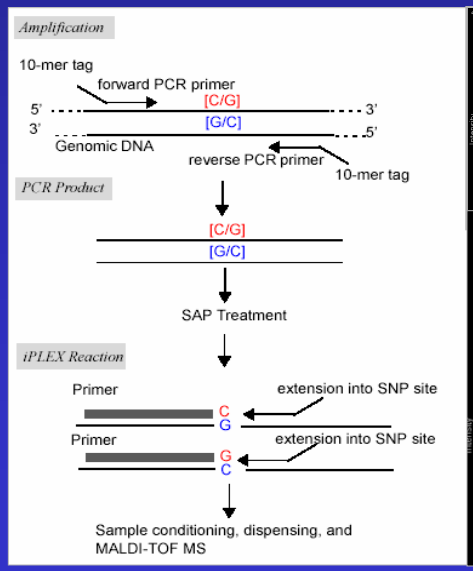
Multiplex PCR

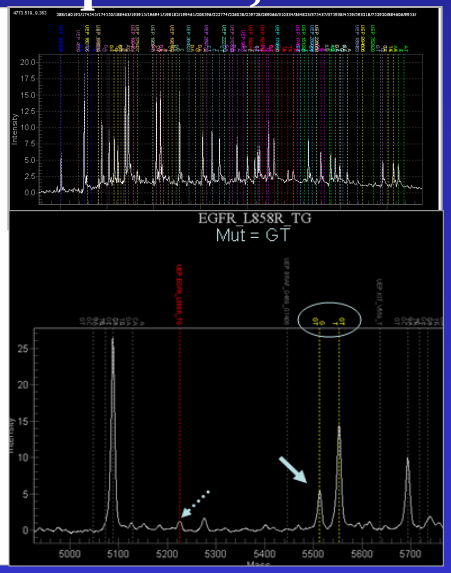


SNaPshot® (Applied Biosystem)



Mass ARRAY SNP - Sequenom, Inc



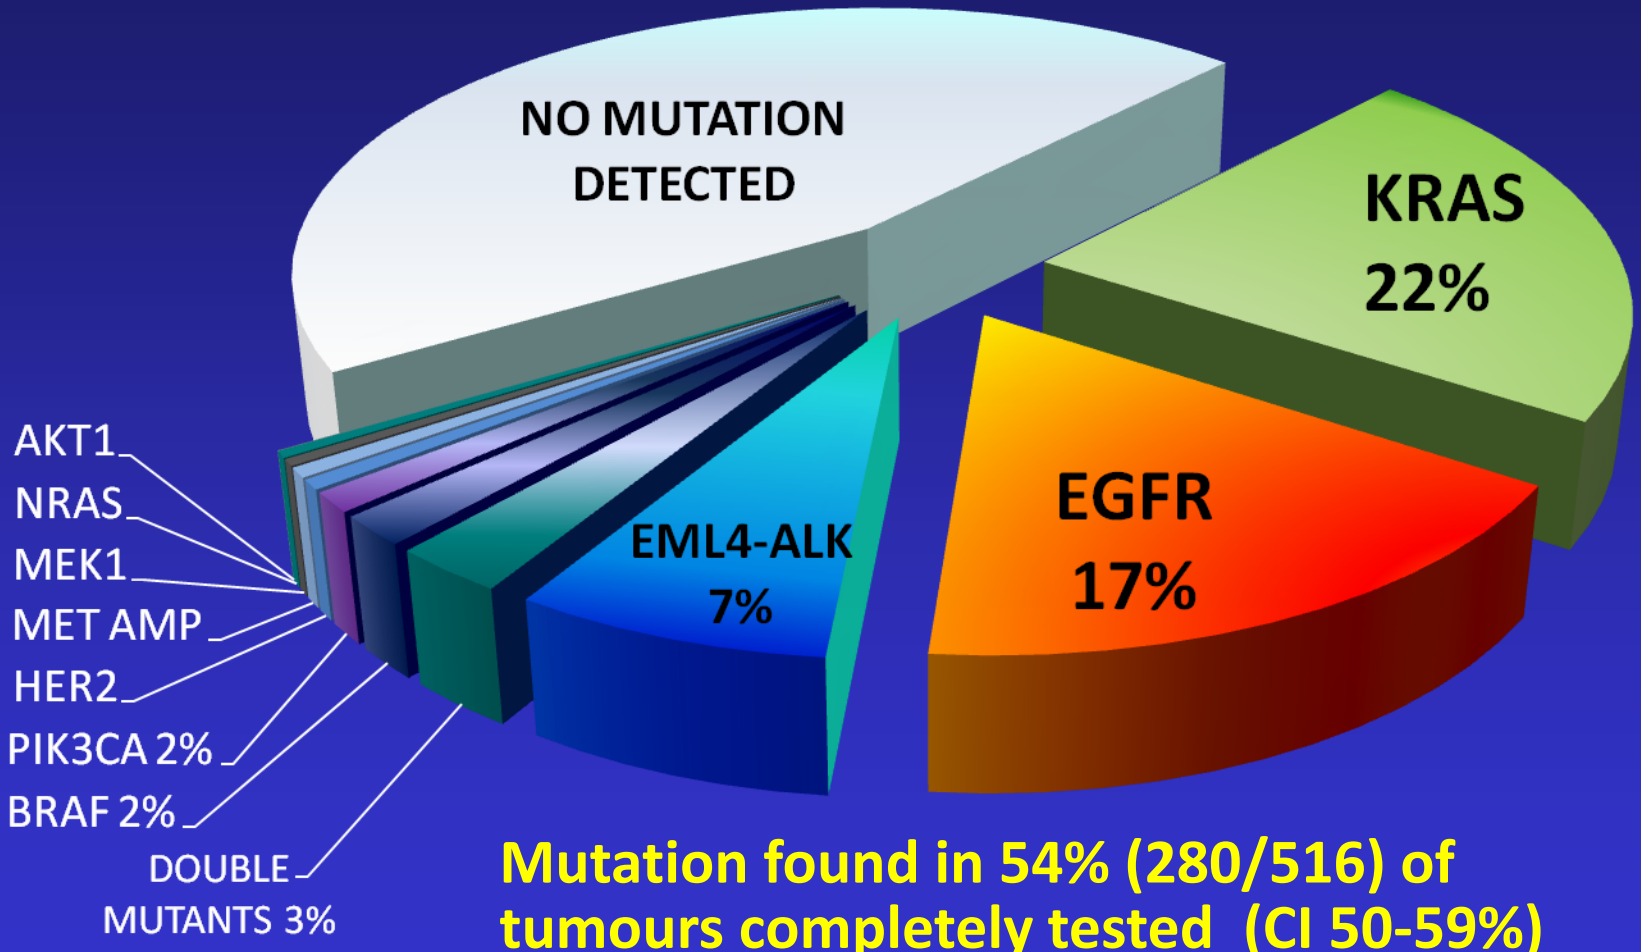


Dias-Santagata, EMBO Mol Med 2:146, 2010

10% Sensitivity and ~20ng DNA/multiplex reaction

Lung Cancer Mutation Consortium

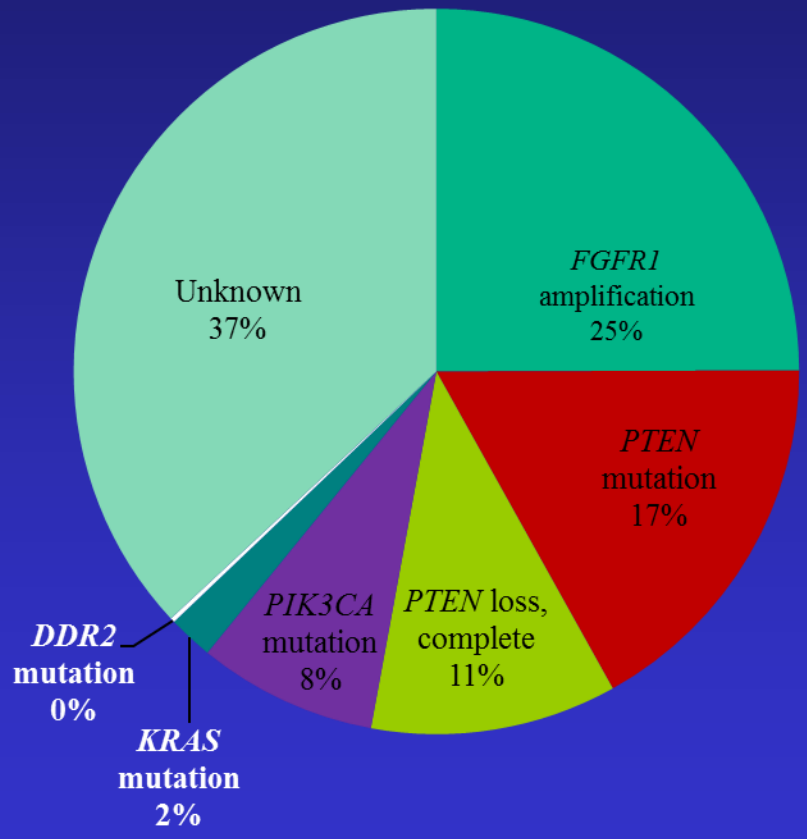
Incidence of Mutations Detected



Mutation found in 54% (280/516) of tumours completely tested (CI 50-59%)

Kris et al. ASCO 2011, Abstract 7506

Multiplex Testing in Squamous Cell Lung Cancer: SQ-MAP integrated results



Target	N	Frequency	95% CI
FGFR1 amplification	13/52	25%	15–38%
PTEN mutation 17%	3/18	17%	5–37%
PTEN loss, complete	3/27	11%	3–26%
PIK3CA mutation	4/52	8%	2–17%
KRAS mutation	1/52	2%	1–9%
DDR2 mutation	0/18	0%	0–15%

Active for lung in August 2012 at the CIO

Ensuring equity of access to innovation: France organisation of molecular centres for personalized medicine

Provides nationwide molecular diagnostic tests

The programme is operated by the INCa/Ministry of Health since 2006

➢ Objectives

- **Perform molecular testing for all patients;**
- **Whatever the healthcare institution status (public hospitals, private hospitals…);**
- **Perform high quality tests;**
- **leukemia, solid tumours**

➢ 28 regional centres

- **Partnerships between several laboratories located in University hospitals and cancer centres**
- **Regional organization**
- **Cooperation between pathologists and biologists**

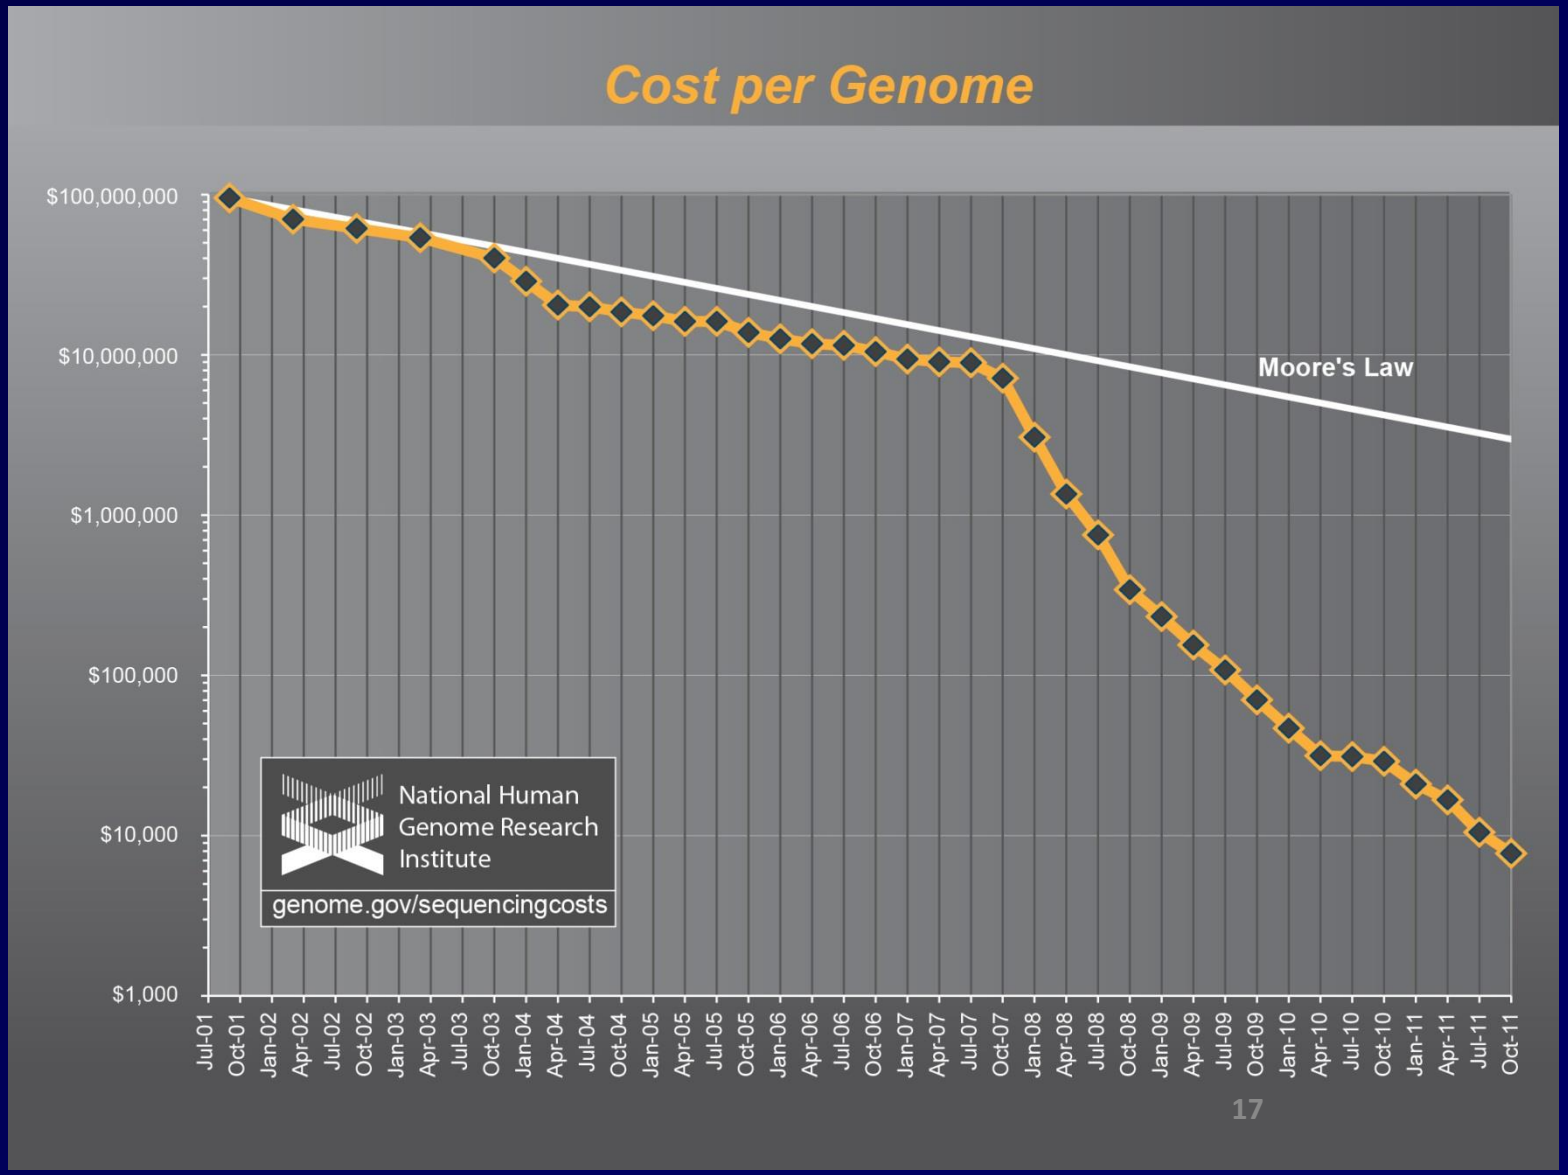
Oxford Nanopore Technology

- Latest sequencing technology announced last month
- Size of USB drive
- May drive the next revolution in genomics
- Whole genome sequencing in 15 minutes for less than $1,000
- Commercially available by the end of this year

Cost Per Genome

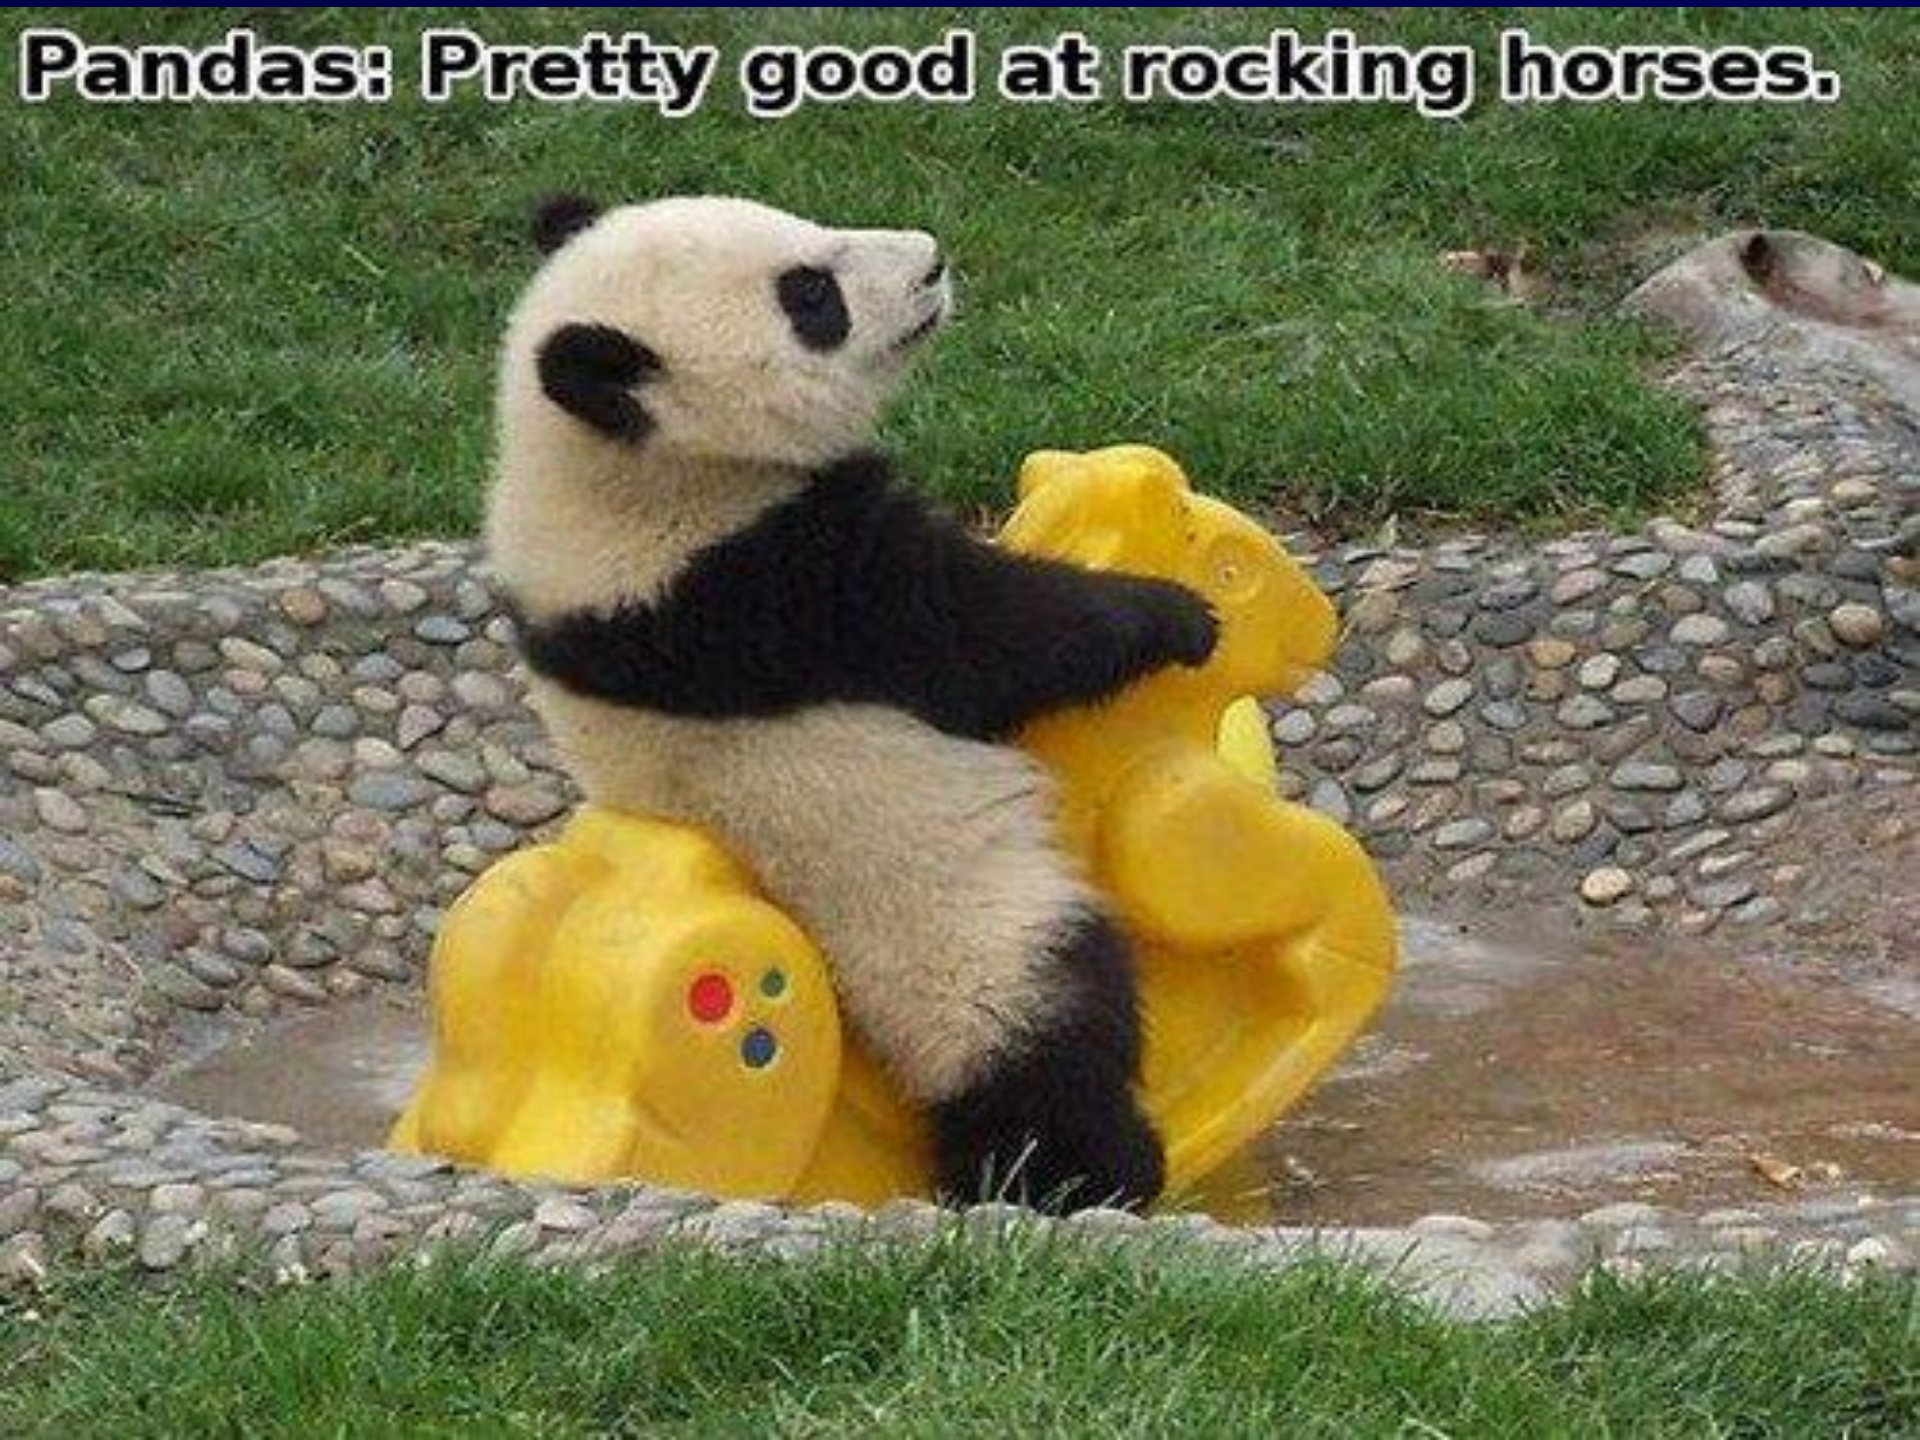


Summary
Personal genomics in medicine – The future

- Cost of sequencing genomes dropping - $1000 genome
  - Analysis and understanding will remain expensive
- Every child born or patient will likely have his or her genome sequenced fully
- This genome record should allow physicians to make treatment decisions based on patients genotypes
- Will allow individuals to make appropriate lifestyle choices
  - Food, exercise etc
- Genome data will allow rapid drug development

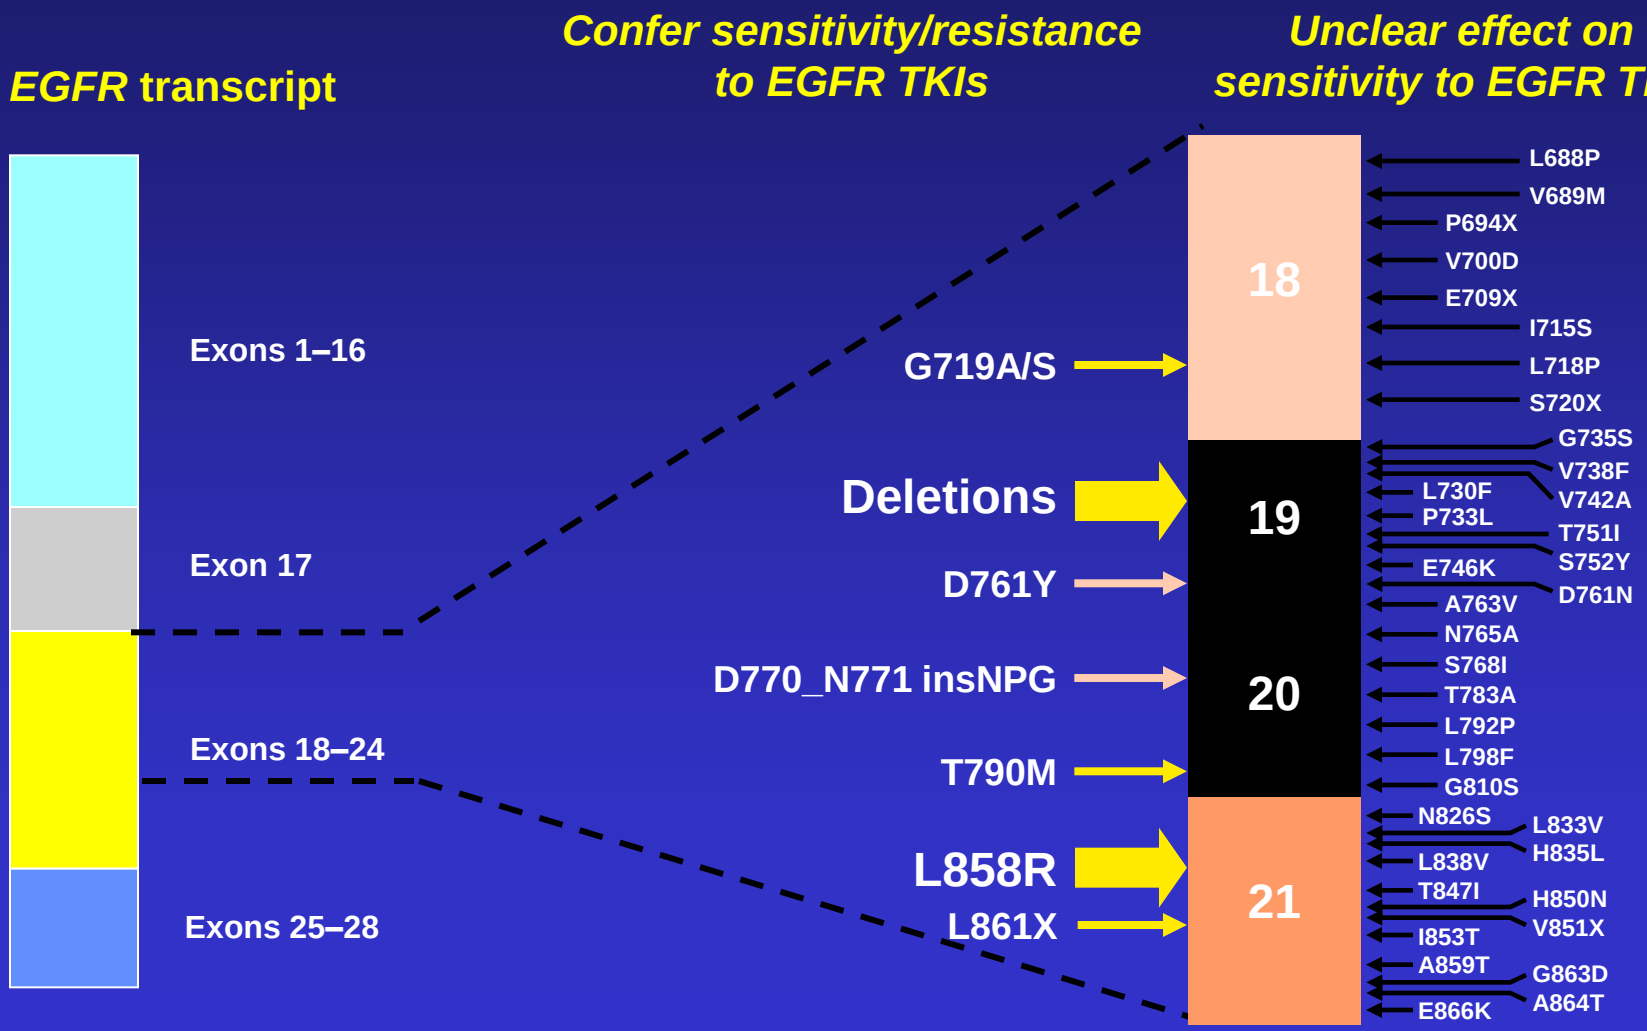
HOLD ON TO YOUR HORSES!

We Need a Reality Check!



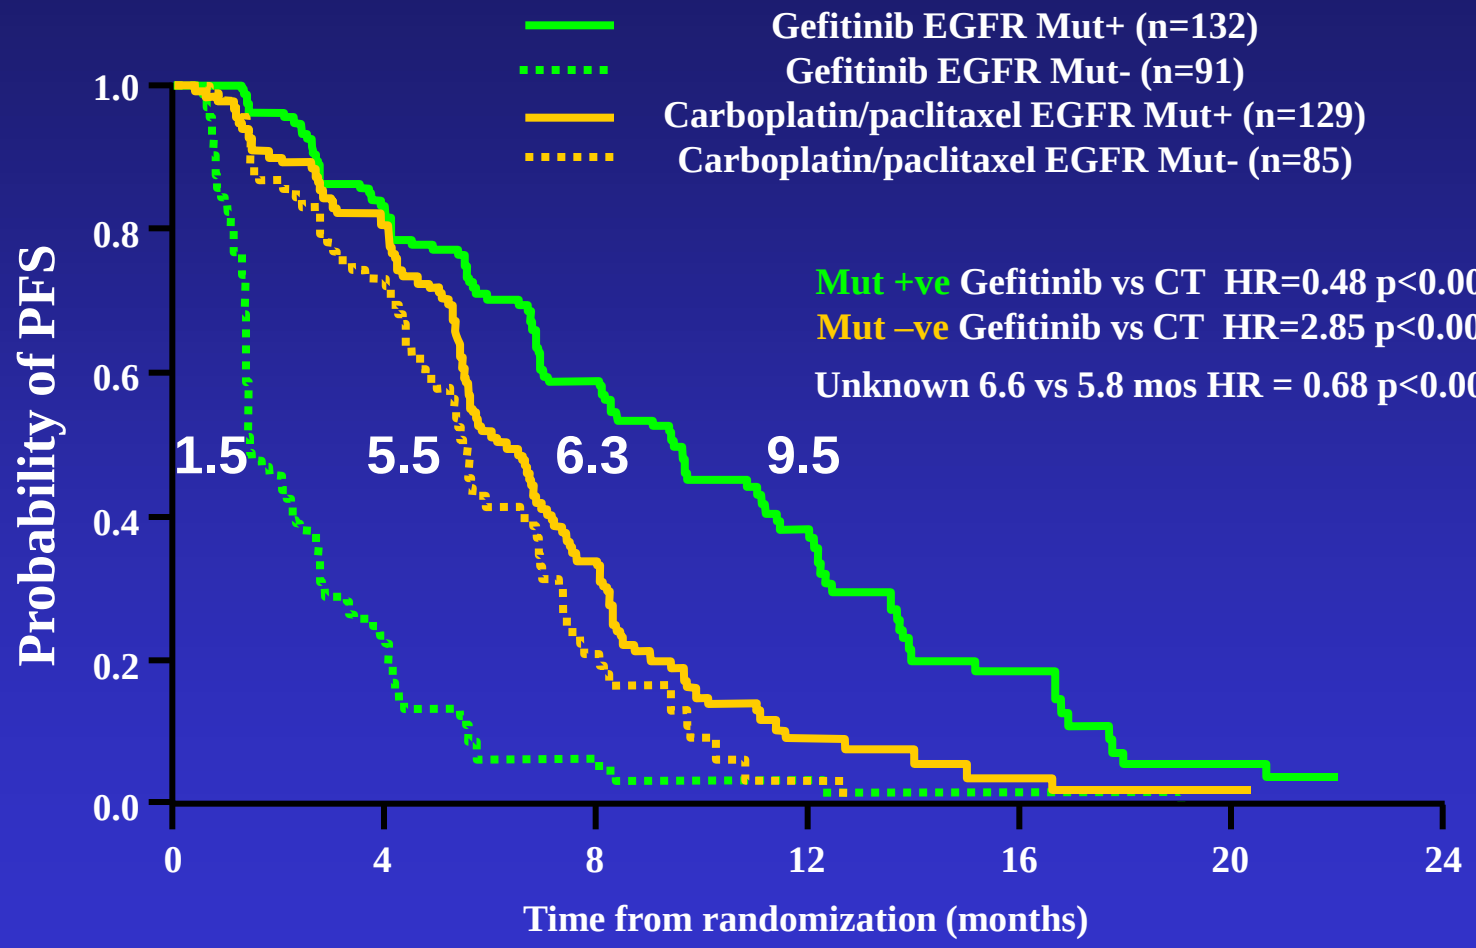
Pandas: Pretty good at rocking horses.

Mutations identified in *EGFR* gene



Riely, et al. Clin Cancer Res 2006

IPASS: EGFR mutation status defined population benefiting from treatment



PFS treatment by EGFR mutation status interaction test: p<0.0001

Mok et al. NEJM 2009; Fukuoka et al. JCO 2009

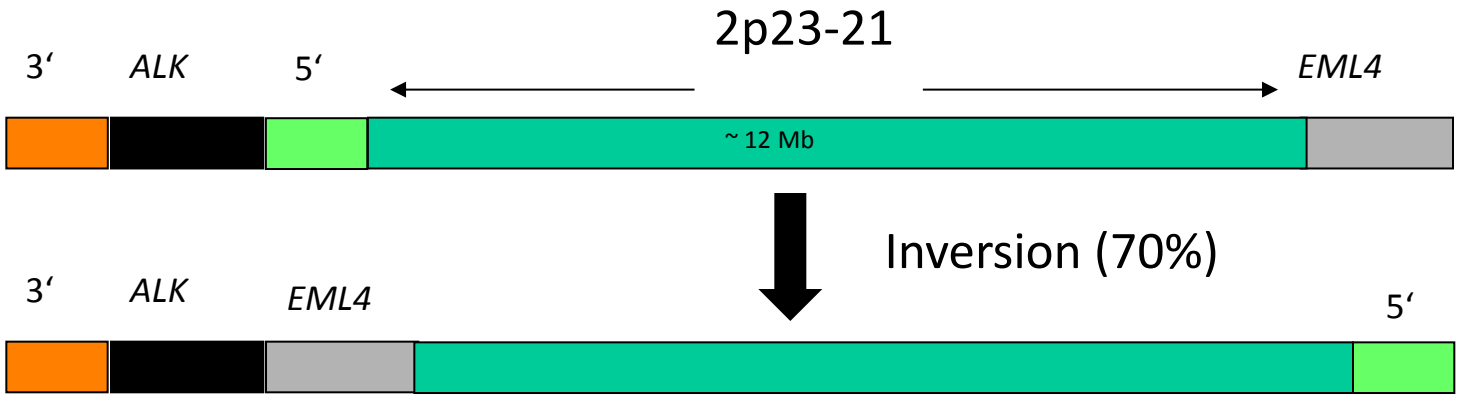
LUX-Lung 3:

PFS common mutations (Del19/L858R)

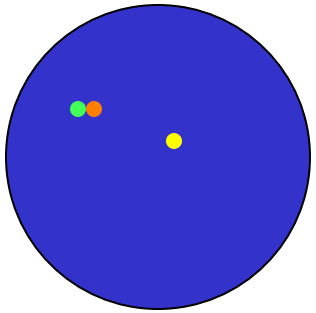
	Afatinib n=204	Cis/pem n=104
PFS event, n (%)	130 (64)	61 (59)
Median PFS (months)	**13.6**	**6.9**
Hazard ratio (95% confidence interval)	**0.47** (0.34–0.65) p<0.0001	

Afatinib	204	169	143	115	75	49	30	10	3	0
Cis/Pem	104	62	35	17	9	6	2	2	0	0

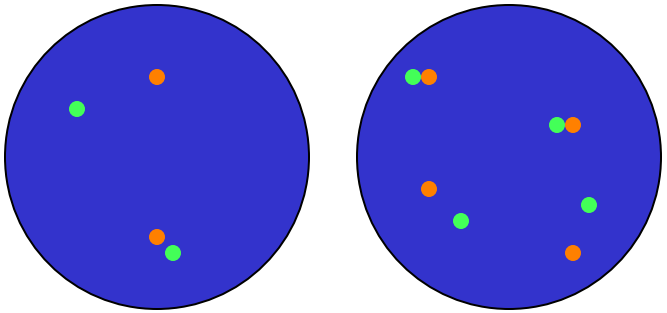
Fluorescence *in situ* Hybridisation

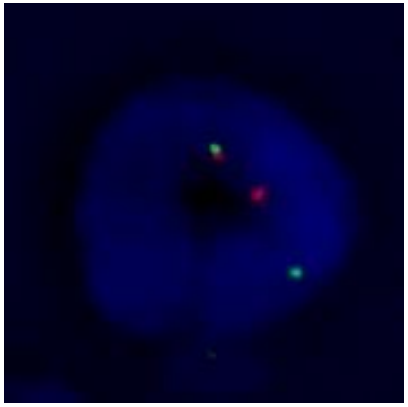


Gene Fusion



Negative

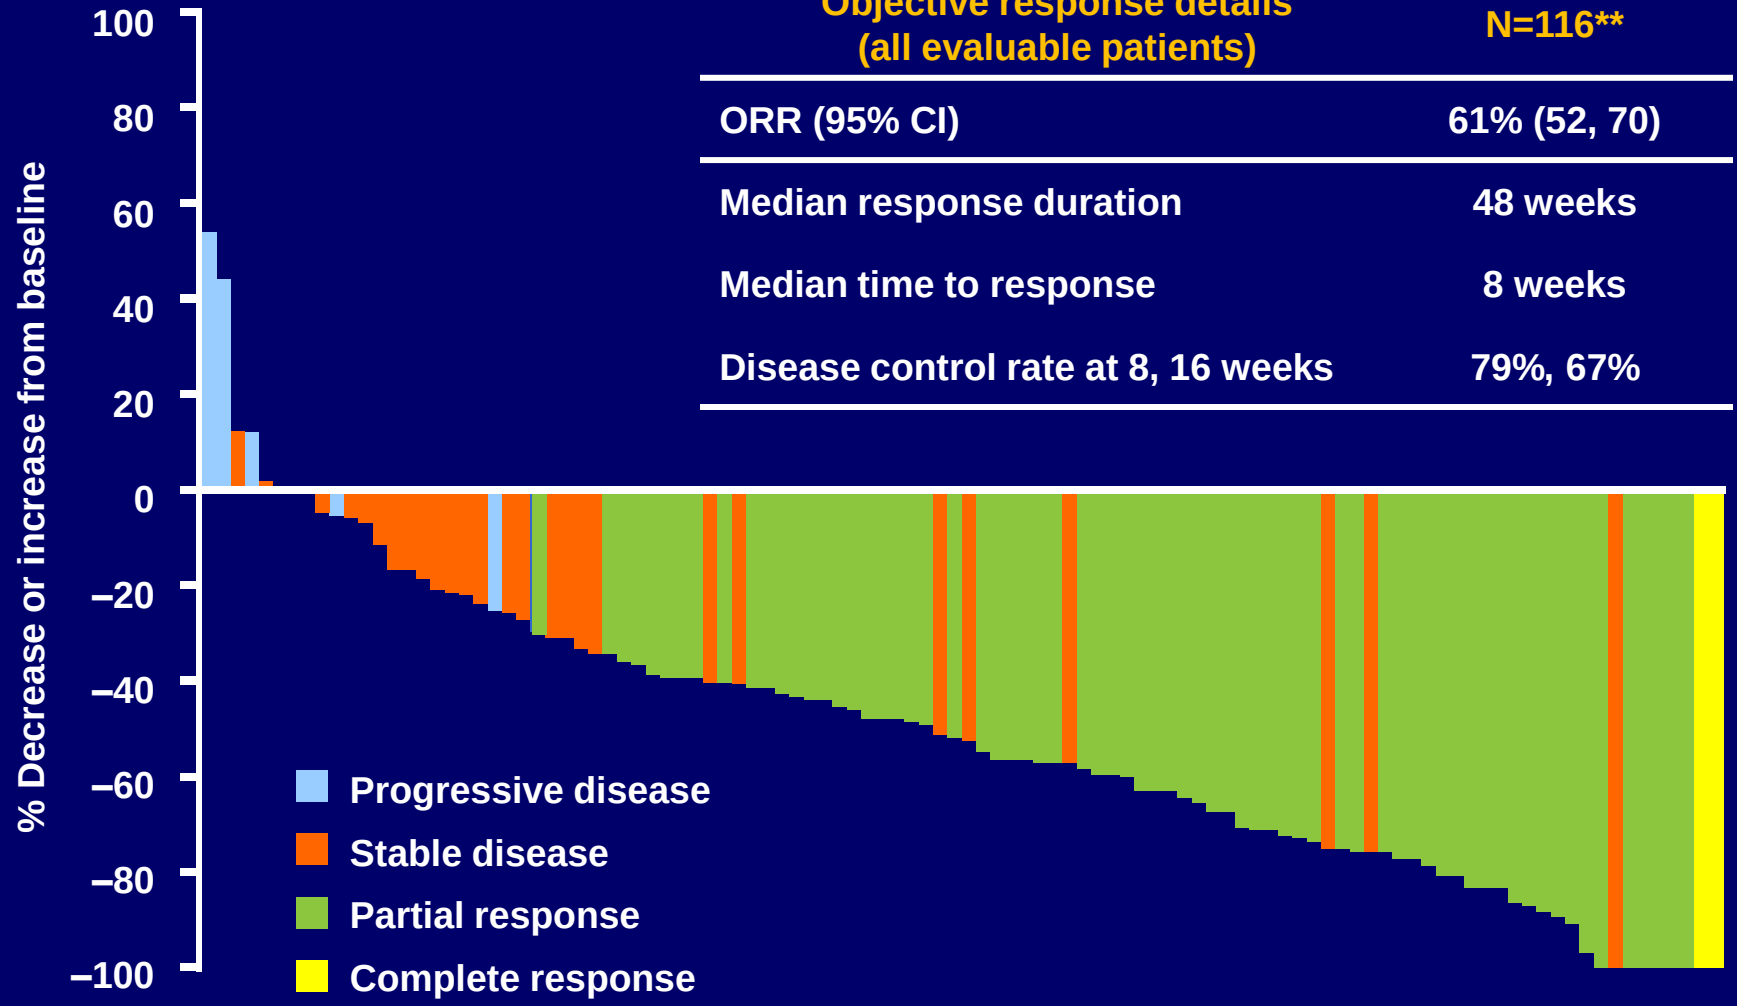




Positive (break-apart - inversion)

Best Percent Change from Baseline in Target Lesions*

Objective response details (all evaluable patients)	N=116**
ORR (95% CI)	61% (52, 70)
Median response duration	48 weeks
Median time to response	8 weeks
Disease control rate at 8, 16 weeks	79%, 67%



*excludes patients with early death and indeterminate response (n=106)
**includes patients with early death and indeterminate response (n=116)

Camidge *et al.* Oral abstract no. 2501 presented at ASCO 2011

PFS of Crizotinib vs Pemetrexed or Docetaxel

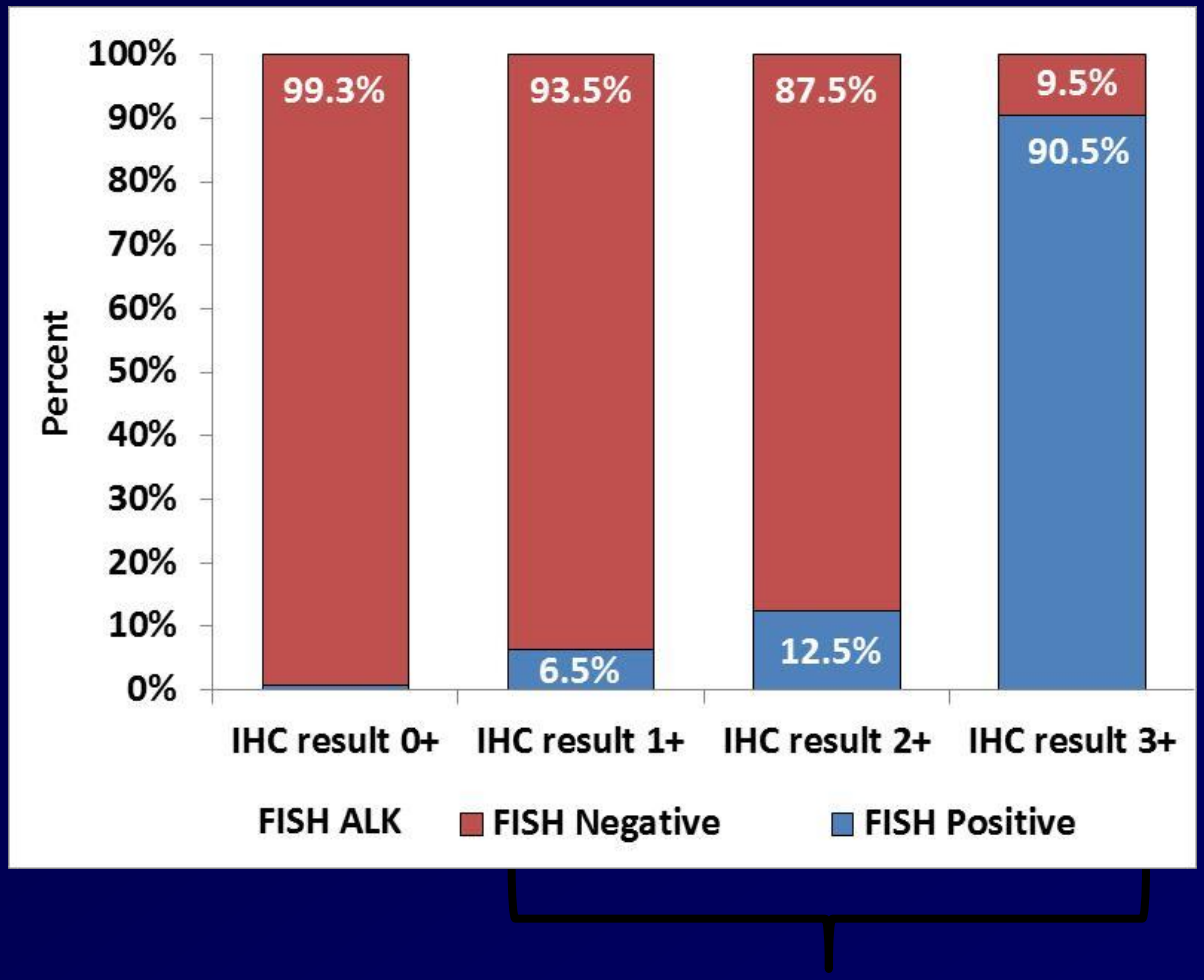
	Crizotinib (n=172[a])	Pemetrexed (n=99[a])	Docetaxel (n=72[a])
Events, n (%)	100 (58)	72 (73)	54 (75)
Median, mo	7.7	4.2	2.6
HR[b] (95% CI)		0.59 (0.43 to 0.80)	0.30 (0.21 to 0.43)
P		0.0004	<0.0001

No. at risk						
Crizotinib	172	93	38	11	2	0
Pemetrexed	99	36	12	3	1	0
Docetaxel	72	13	3	1	0	

[a]As-treated population: excludes 1 patient in crizotinib arm who did not receive study treatment and 3 patients in chemotherapy arm who did not receive study treatment; [b]vs crizotinib

Shaw et al, ESMO, 2012

Association of ALK IHC and FISH, N=198



36.7% of IHC+ are FISH+

For ALK IHC + vs –

(IHC 1+/2+/3+ vs IHC 0+)

FISH Sensitivity=36.7%
22 FISH + / 60 IHC +

FISH Specificity=99.3%
137 FISH - / 138 IHC –
p<0.001

For ALK IHC 3+ vs 0/1+/2+

FISH Sensitivity = 90.5%
19 FISH + / 21 IHC 3 +

FISH Specificity = 97.7%
173 FISH - / 177 IHC 0+/1+/2+
p<0.001

EGFR mutations and ALK rearrangements

- The only validated predictive biomarkers in NSCLC
- Quality assured in many centres
- Targeted by agents tested in randomised clinical trials that are available for our patients

Currently, Two Approved Personalised Treatment Options: Substantial Benefit for ~15% of Patients

Crizotinib in ALK-positive NSCLC

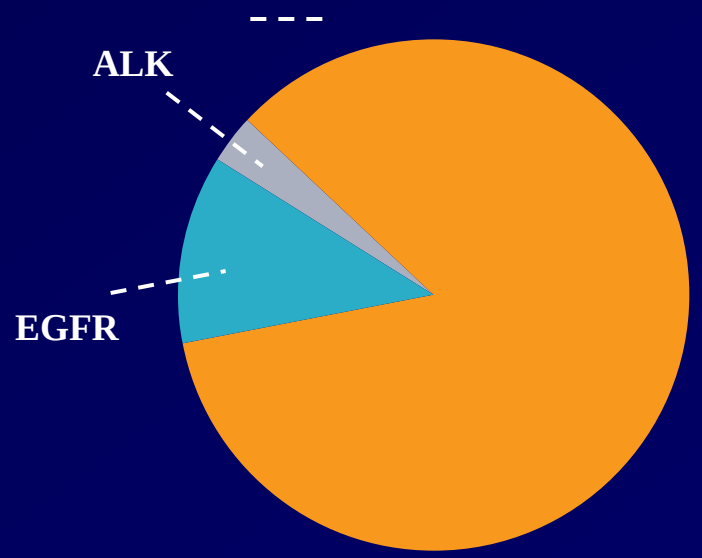
RR 60%, PFS 8 months

EGFR-TKIs in EGFR-mut NSCLC

Gefitinib, Erlotinib (US, EU)

RR 60–80%, PFS 10–13 months,

OS 19–30 months



……AND DO THESE TARGETED AGENTS IMPROVE SURVIVAL!

The Jury is Still Out!

PROFILE 007: Interim Analysis of OS

	Crizotinib (n=173)	Chemotherapy[a] (n=174)
Events, n (%)	49 (28)	47 (27)
Median, mo	20.3	22.8
HR (95% CI)	1.02 (0.68 to 1.54)[b]	
P	0.5394	

No. at risk							
Crizotinib	173	129	83	37	11	1	0
Chemotherapy	174	129	84	34	10	0	

[a]111 patients crossed over to crizotinib outside PROFILE 1007
[b]HR adjusted for crossover using rank-preserving structural failure time method: 0.83 (0.36 to 1.35)

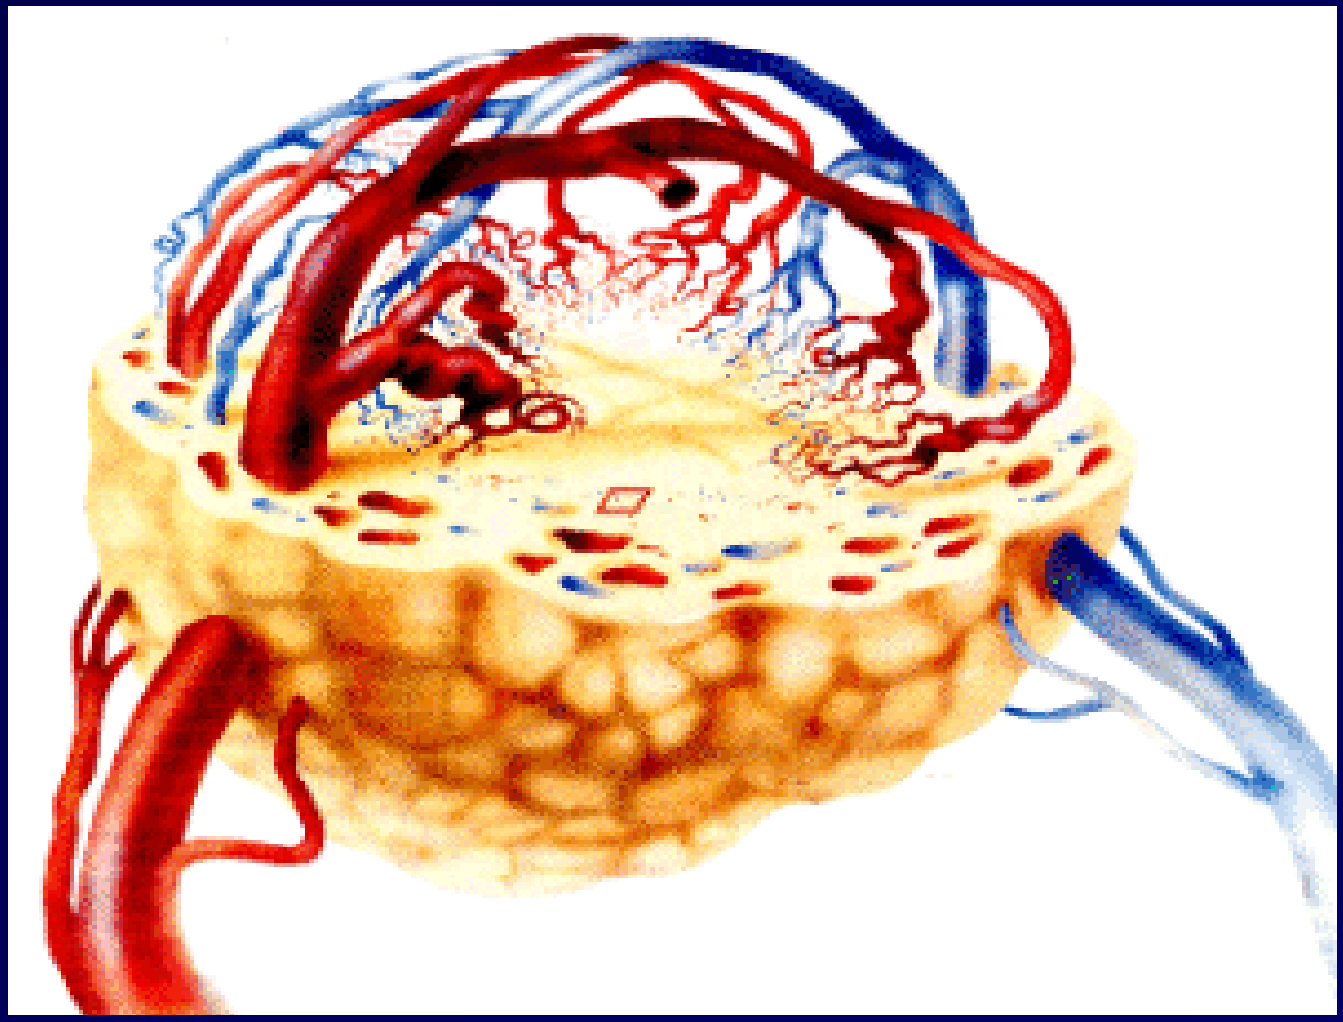
Crossover vs Tumour Biology……

LESSONS LEARNT THE HARD…

AND VERY EXPENSIVE…

WAYS!

Tumour Angiogenesis



Prognostic Significance of MVD in NSCLC

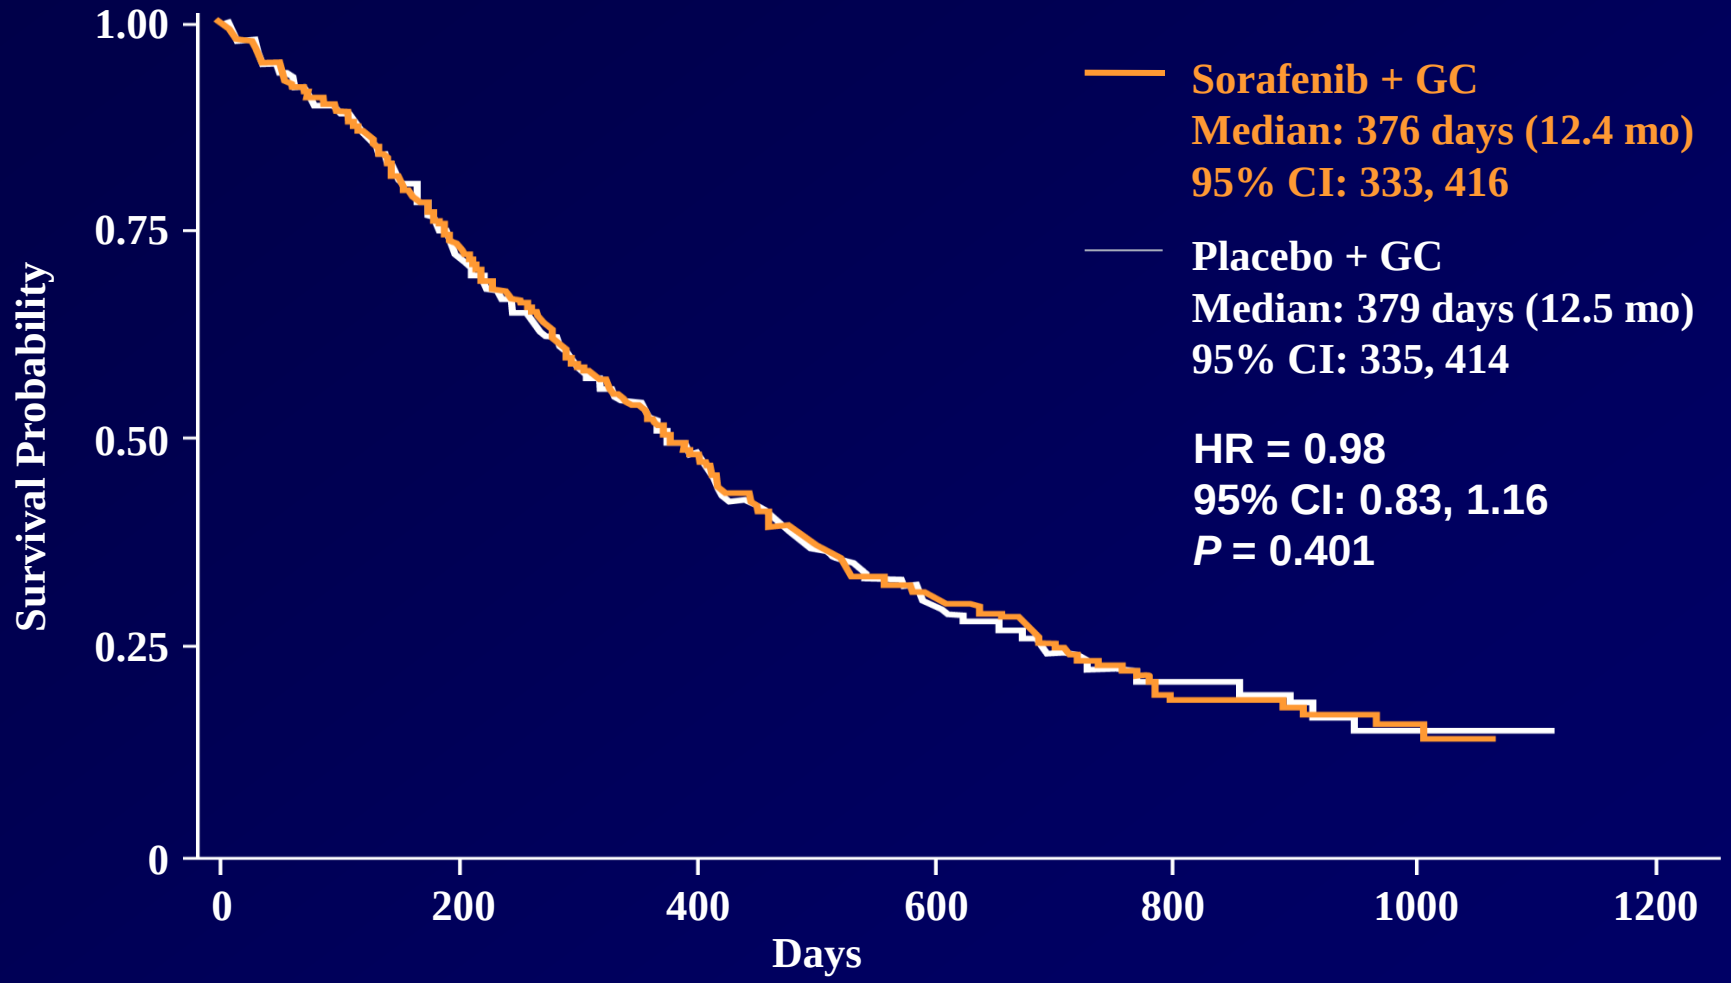
*Binds also to FGFR
**Binds also to EGFR

NEXUS Overall Survival
Non-Squamous Population (ITT)



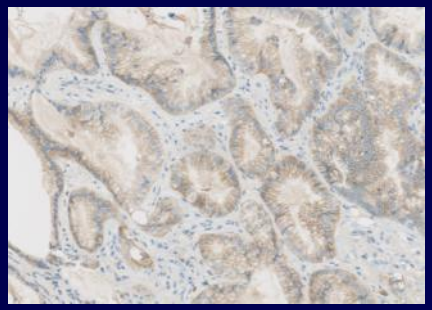
Gatzemeier U et al ESMO 2010 Ann Oncol 2010 S8 LBA 16

……AND WHAT ABOUT THE PROTEINS!

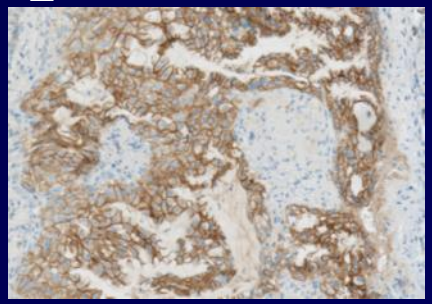
Development of Met IHC as a Diagnostic

- **Intensity of Met staining on tumor cells scored on 0–3+ scale**

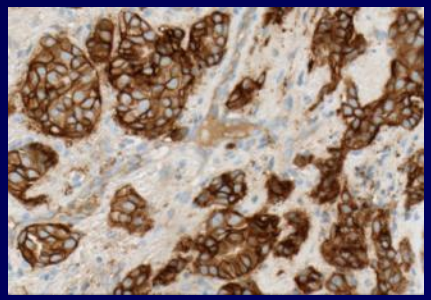
1+



2+



3+



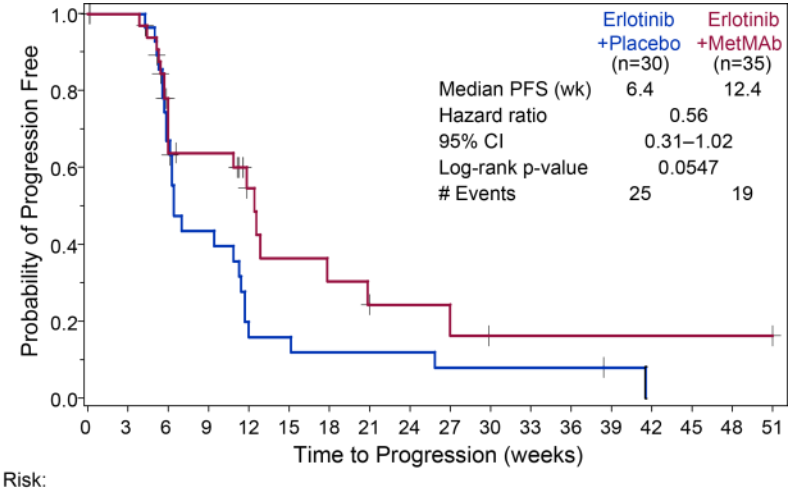
- **Estimated that ~50% of patients would have 'Met High' tumors**
- **Met by IHC was assessed after randomization**

'Met High' was defined prior to unblinding as:
≥50% tumor cells with a staining intensity of 2^+ or 3^+

- Tissue was obtained from **100%** of patients.
- **95%** of patients had adequate tissue for evaluation of Met by IHC.
- **54%** patients had 'Met High' NSCLC.

PFS and OS: Met High Population

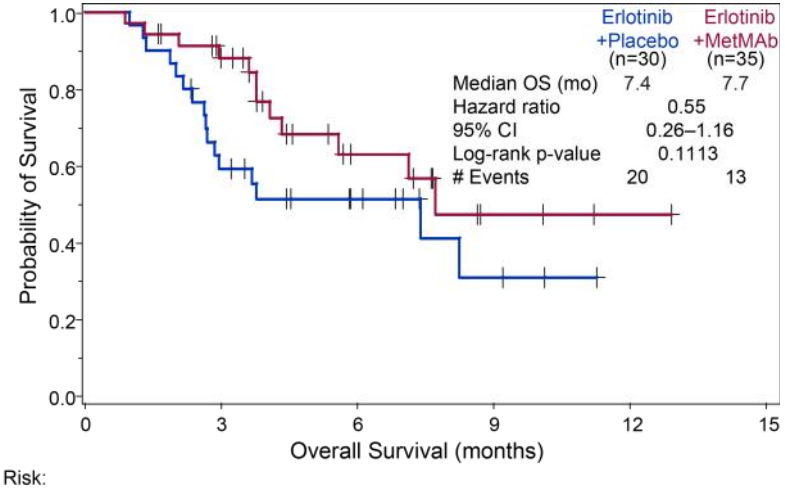
PFS, HR=0.56



Number at Risk:

Erlotinib+Placebo	30	18	5	3	3	2	2	0	0
Erlotinib+MetMAb	35	22	9	5	3	1	1	1	1

OS, HR=0.55

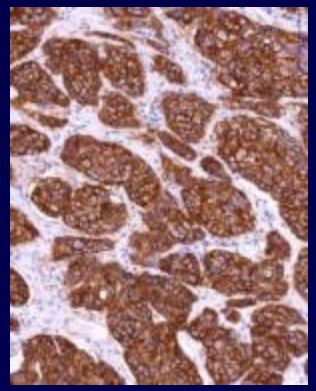


Number at Risk:

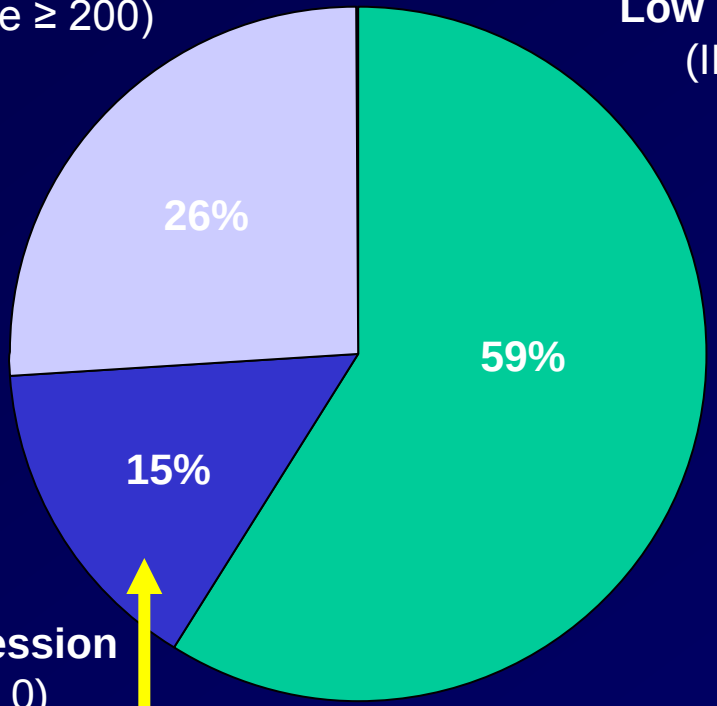
Erlotinib+Placebo	30	17	9	3	0	0
Erlotinib+MetMAb	35	26	10	3	1	0

MetMAb+Erlotinib improves both PFS and OS in Met High NSCLC patients

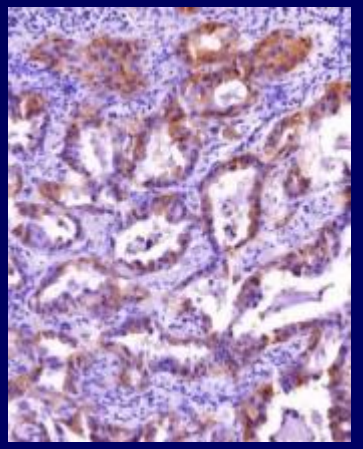
EGFR expression in FLEX patients

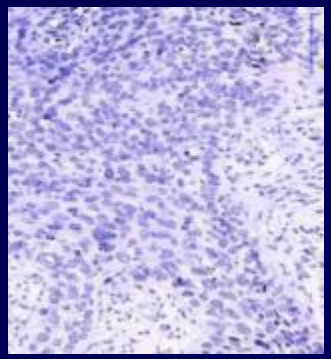


High EGFR Expression
(IHC score ≥ 200)



Low EGFR Expression
(IHC score <200)





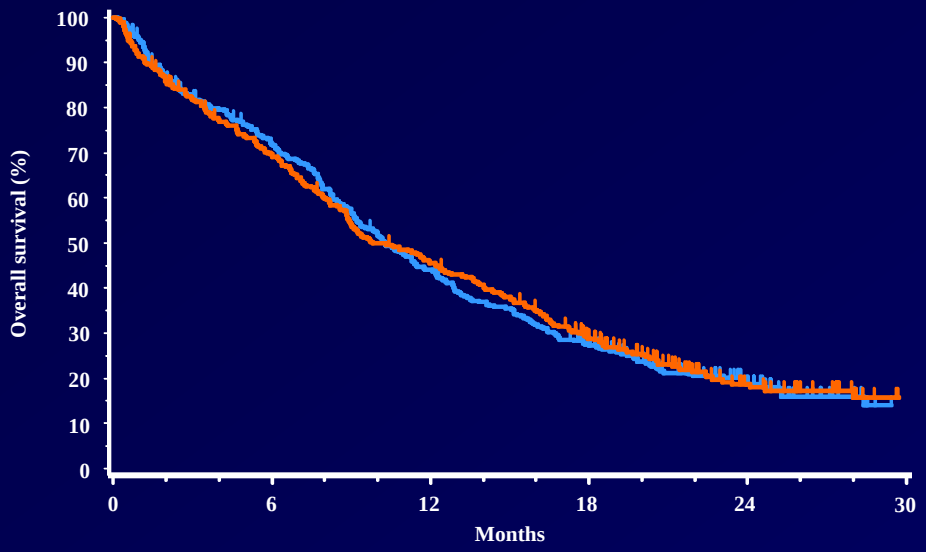
No EGFR Expression
(IHC score = 0)

Not included in FLEX

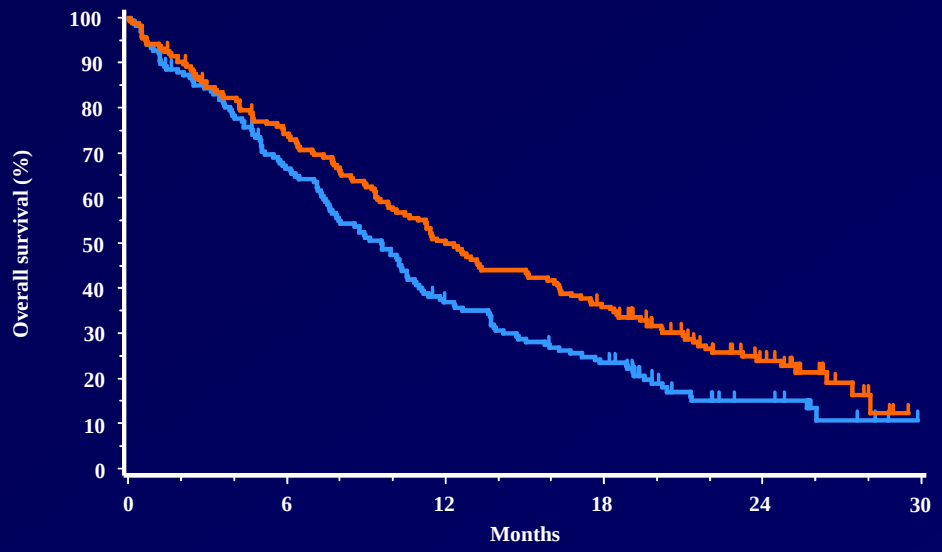
Rüschoff et al, WCLC, 2011

High EGFR is predictive for survival benefit with CT + cetuximab

Low EGFR



High EGFR



CT
CT + cetuximab

Interaction p-value=0.044

CT, chemotherapy

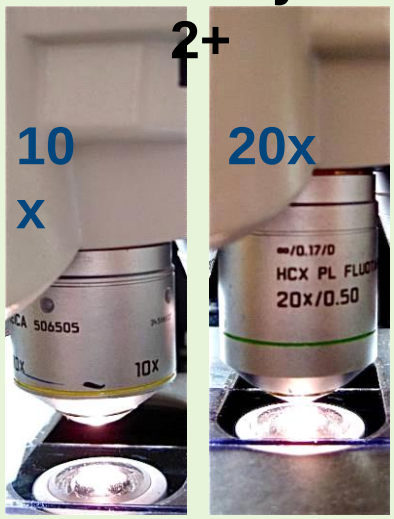
EGFR IHC scoring instructions

- Four intensities: 0 = no staining,1+ = weak, 2+ = moderate, 3+ = strong staining
- Intensities defined by “magnification rule” (Rüschoff et al. 2010):

Staining intensity: 3+

Visible by eye or under low power examination: 4x or 5x

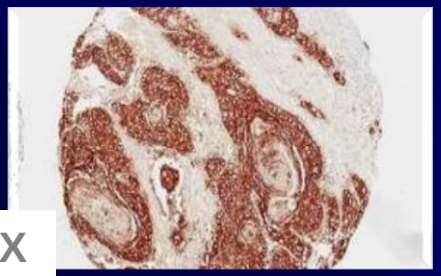
Staining intensity: 2+

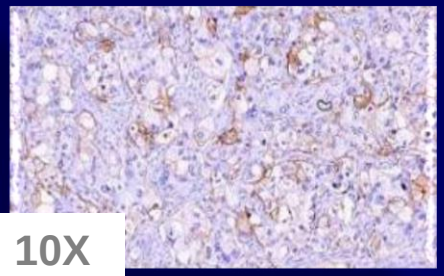


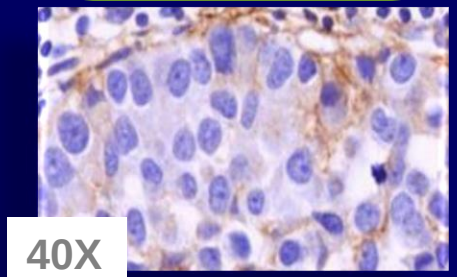
Needs a more detailed magnification : 10x – 20x

Staining intensity: 1+ or 0

Needs high magnification: 40x







Summary

- Predictive biomarker tests must undergo
  - Validation
  - Quality Assurance
- Deep DNA sequencing is a research tool
- Generates clinically irrelevant data
  - May confuse clinician
  - May confuse the patient

Conclusion

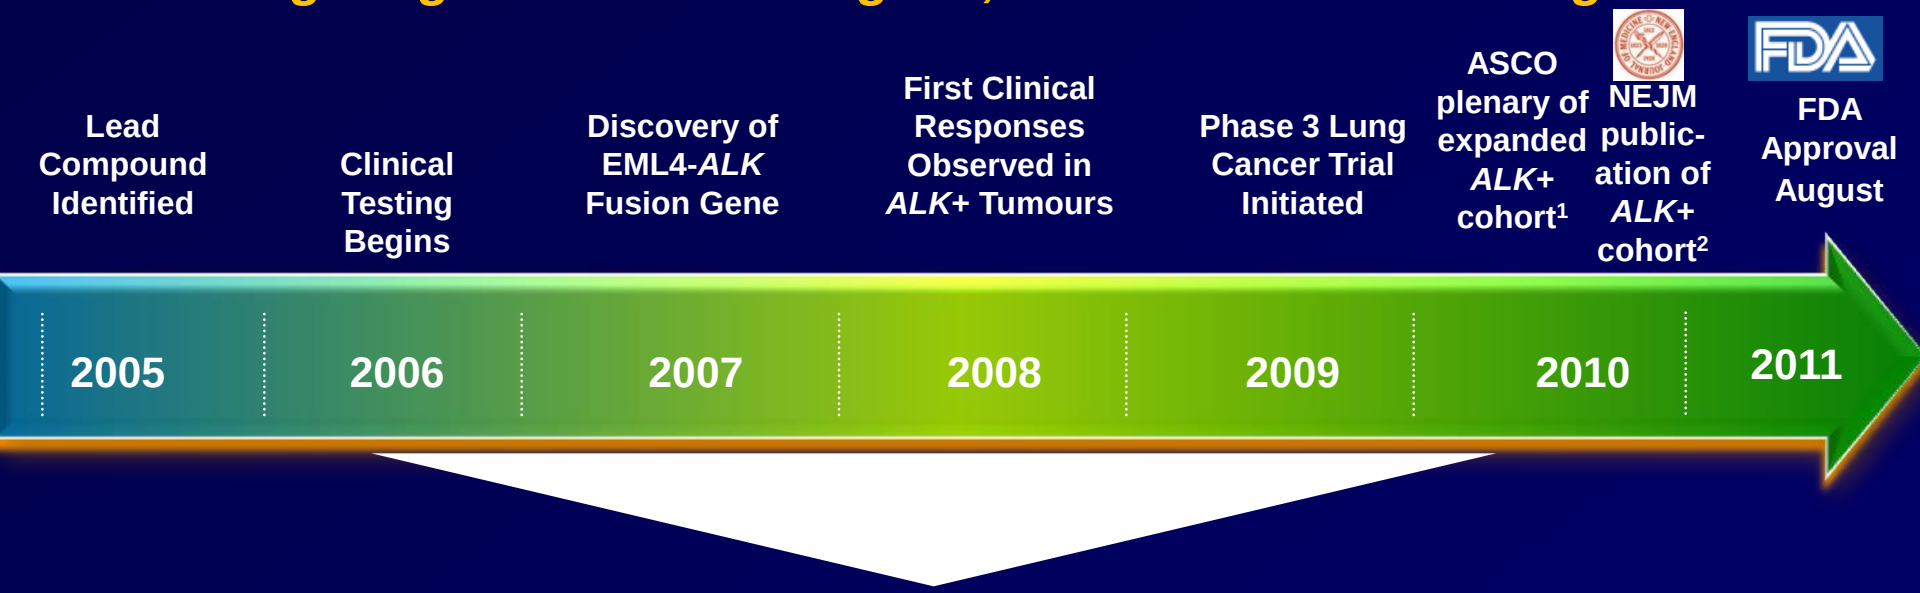
- Deep DNA sequencing is very nice and intellectually very stimulating!

BUT

- Is not yet ready for routine use in the clinic
- Needs to be **controlled** and **utilised** appropriately
  - **As a research tool**

Crizotinib: Pathway from Compound Identification to Discovery of *ALK* Target and Clinical Results

Crizotinib (PF-02341066) scientific breakthrough: Targeting the ALK fusion gene, a direct driver of oncogenesis



Rapid Timeline from Compound Identification, Target Discovery and Clinical Results

Clinical Results to Date

- **Objective response rate = 61%[3]**
- **Disease control rate – Wk 8 (CR+PR+SD) = 79%[3]**
- Median duration of response = 48 weeks*[3]
- Median PFS = 10 months†[3]

*in responding patients

†Fifty-nine (50%) patients remain in follow-up for PFS
