Drug Development 2011

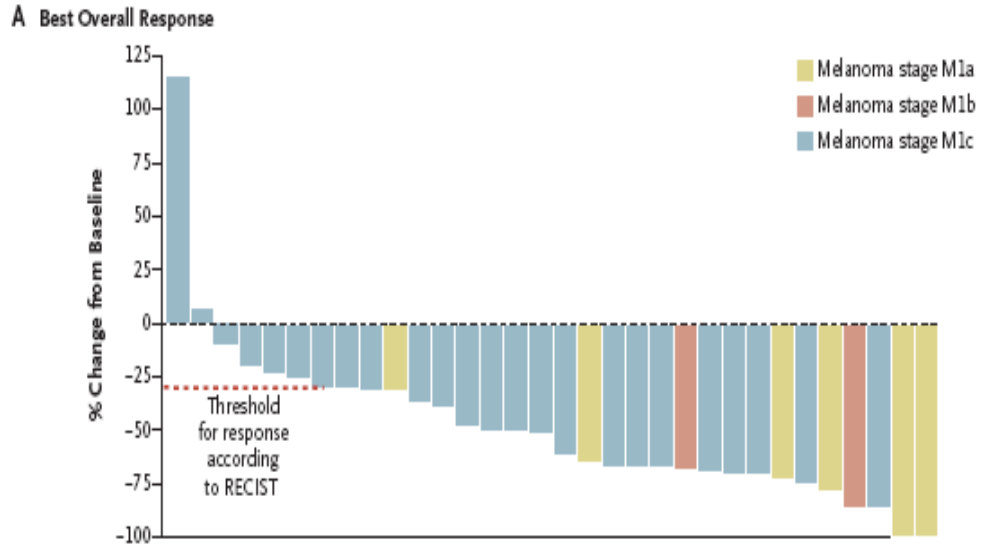
- In Phase I-II "forever"
- Characterize tumors that will allow for very high specific activity
- Early Detection Resistance
- Early development of combinations
  (intrapathway AND interpathway)
- Fewer and Smaller Phase III trials

Specific genetic traits can predict for the success of targeted agents

PHASE 1 DATA

TELL IT ALL !

B-RAF inhibitor in melanoma (V600E BRAF mutation) *NEJM 2010*



Hedgehog inhibitor in BCC (PTCH mutation) *NEJM 2010*

JOURNAL OF CLINICAL ONCOLOGY | BIOLOGY OF NEOPLASIA

Dissecting Therapeutic Resistance to RAF Inhibition in Melanoma by Tumor Genomic Profiling

Nikhil Wagle, Caroline Emery, Michael F. Berger, Matthew J. Davis, Allison Sawyer, Pankaj Pochanard, Sarah M. Kehoe, Cory M. Johannessen, Laura E. MacConaill, William C. Hahn, Matthew Meyerson, and Levi A. Garraway

- PDGFRβ overexpression: 4/11 biopsies from relapsed patients[1]
- NRAS mutations (Q61K orR): 2/15 samples[1]
- Elevated COT expression which reactivated ERK signaling: 2/3 samples[2]
- Increased levels of IGF-1R and pAKT: activated PI3K pathway signaling (1/5)[3]
- Acquired a MEK mutation at C121S which reactivates the ERK signaling (1/1)[4]

VILLEJUIF - www.igr.fr

COSTS : a major issue

- **Ipilimumab: 4 injections in 3 months: 88.000 EUROS**
  - → **All melanoma patients are candidate**
  - → **At least 80% will get this : NO BIOMARKER**

- **Vemurafenib for BRAF-mutated: 6 months 56.000 EUROS**
  - → **50% will not progress: another 3 months: 81000 EUROS**
  - → **50% will not progress: another 3 months 112.000 EUROS**
  - → **At progression: eligible for reinduction ipilimumab?: add 88.000**

- BRAFinh +MEKinh: price??
- BRAFinh + Mekinh + Ipilimumab Price ???

- **Vemurafenib + Ipilimumab:**
  - → **> 170.000 - >200.000 EUROS**

The Disneyland Paradigm

- In entertainment and in health care you pay up front
- Everybody should have the right to go to Disneyland during the last year of life
- Disneyland tickets are 150.000 Euros
- What will society do?
  - → Provide tickets at this price with equal access for all
  - → Demand price that would allow equal access for all

Of note: in 2022 the whole health care budget in India could be spent on dealing with diabetes type II management alone

Institut de cancérologie
GUSTAVE ROUSSY
VILLEJUIF - www.igr.fr

NOW WHAT ?

BIG IMPACT

in (small) well defined populations

(newly defined diseases)

will decide drug development processes

economic models of molecular medicine

are uncertain

especially if we fail to create CURES

(requests involvement immune system)

Duplication of Effort
Fragmentation of Research
No single institute/nation can do it all

Networking/Consortia is a Must

Noci EORTC
EUROCAN Translational Research Platform
German TR Network
WIN Consortium
etc, etc

INFRASTRUCTURAL REQUIREMENTS for Molecular Portraits

Molecular Diagnostics Division

Broad Array of Technologies

Sequencing

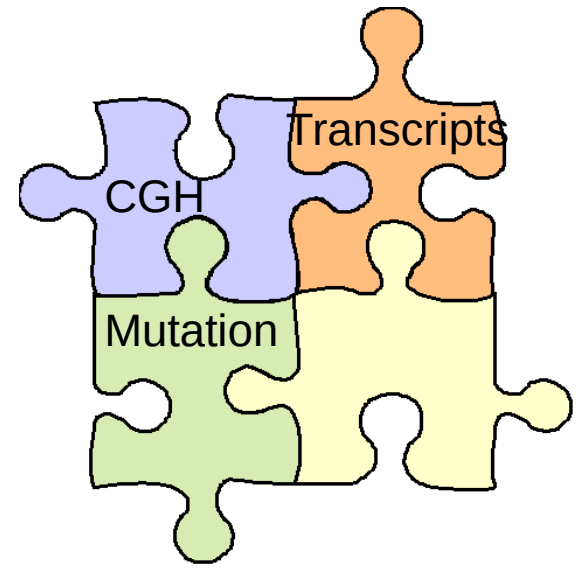
shRNA-screens (functional assays)

CTC capacity

Immunologic Arrays Capacity

(sorting, cloning, kine-arrays, etc)

All OMICS

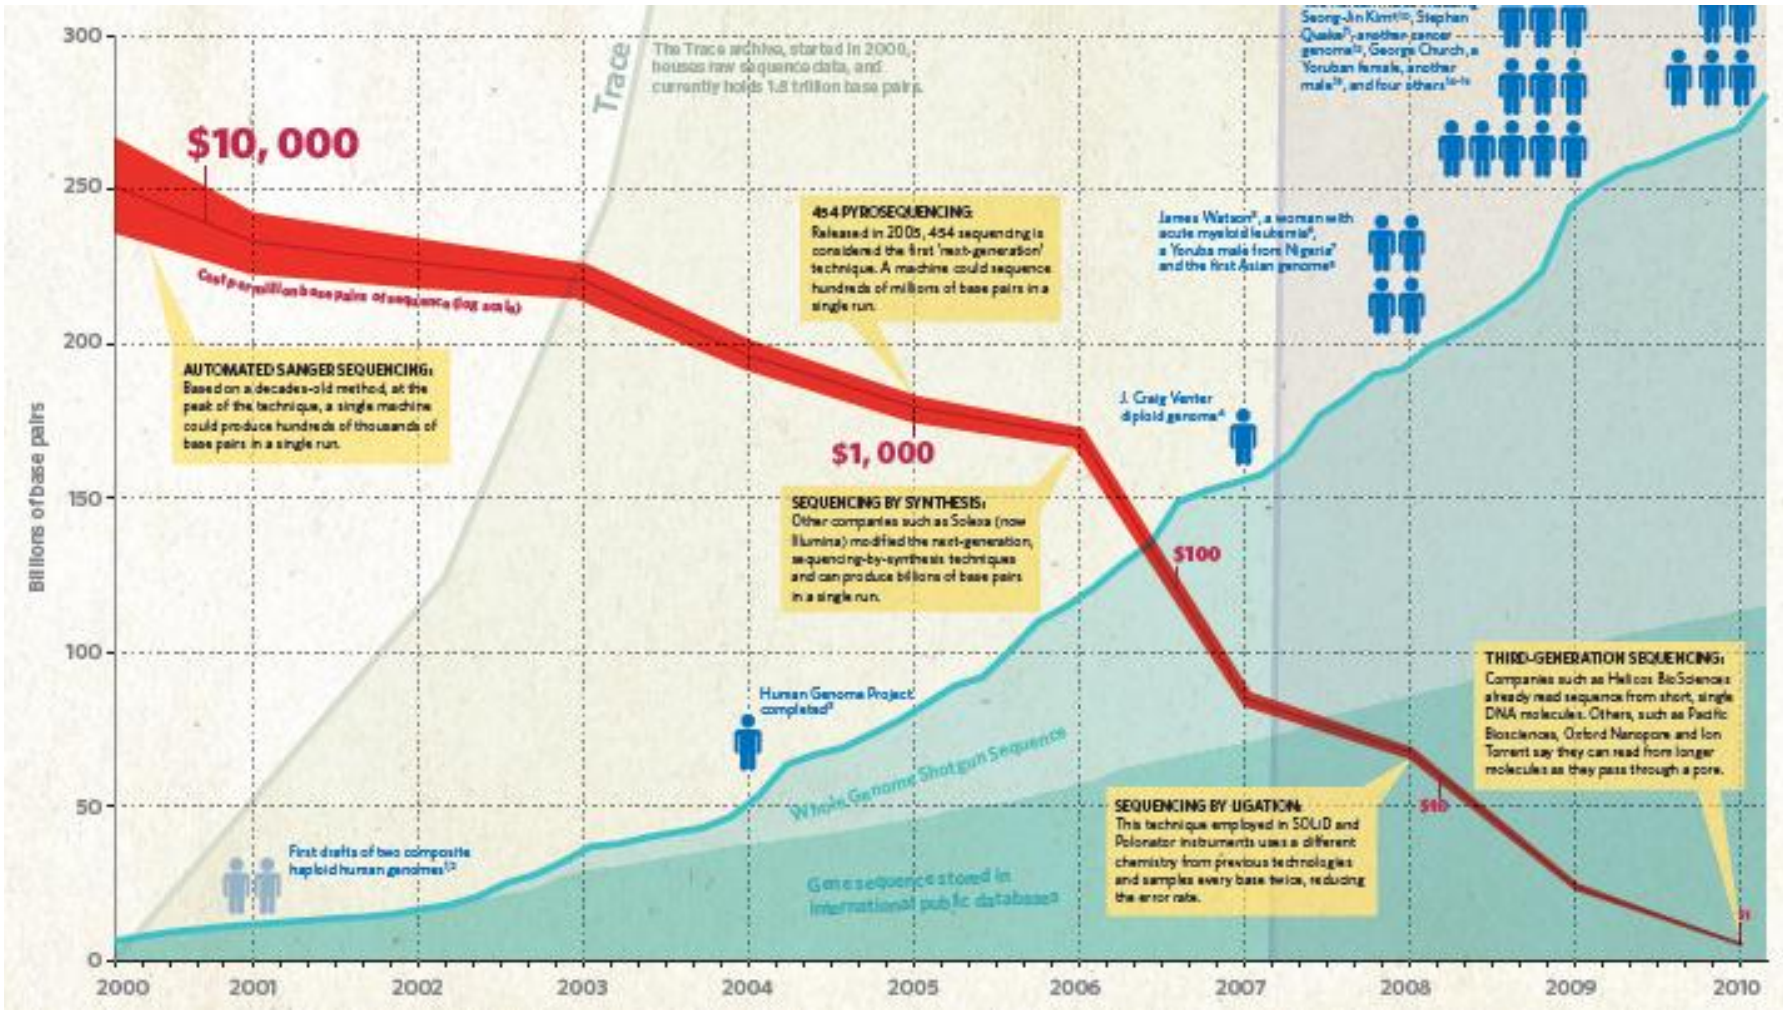


BIO-INFORMATICS

Institut de cancérologie
GUSTAVE ROUSSY
VILLEJUIF - www.igr.fr

Sequencing gets cheaper but increasing complexity poses fundamental and computational problems that are very costly

1 patient becomes a series of projects over time



Challenge: integrating multiple read-outs

A map of human cancer signaling

Qinghua Cui[1], Yun Ma[2], Maria Jaramillo[3], Hamza Bari[1], Arif Awan[1], Song Yang[4], Simo Zhang[2], Lixue Liu[2], Meng Lu[2], Maureen O'Connor-McCourt[3], Enrico O Purisima[1,5] and Edwin Wang[1,5,*]

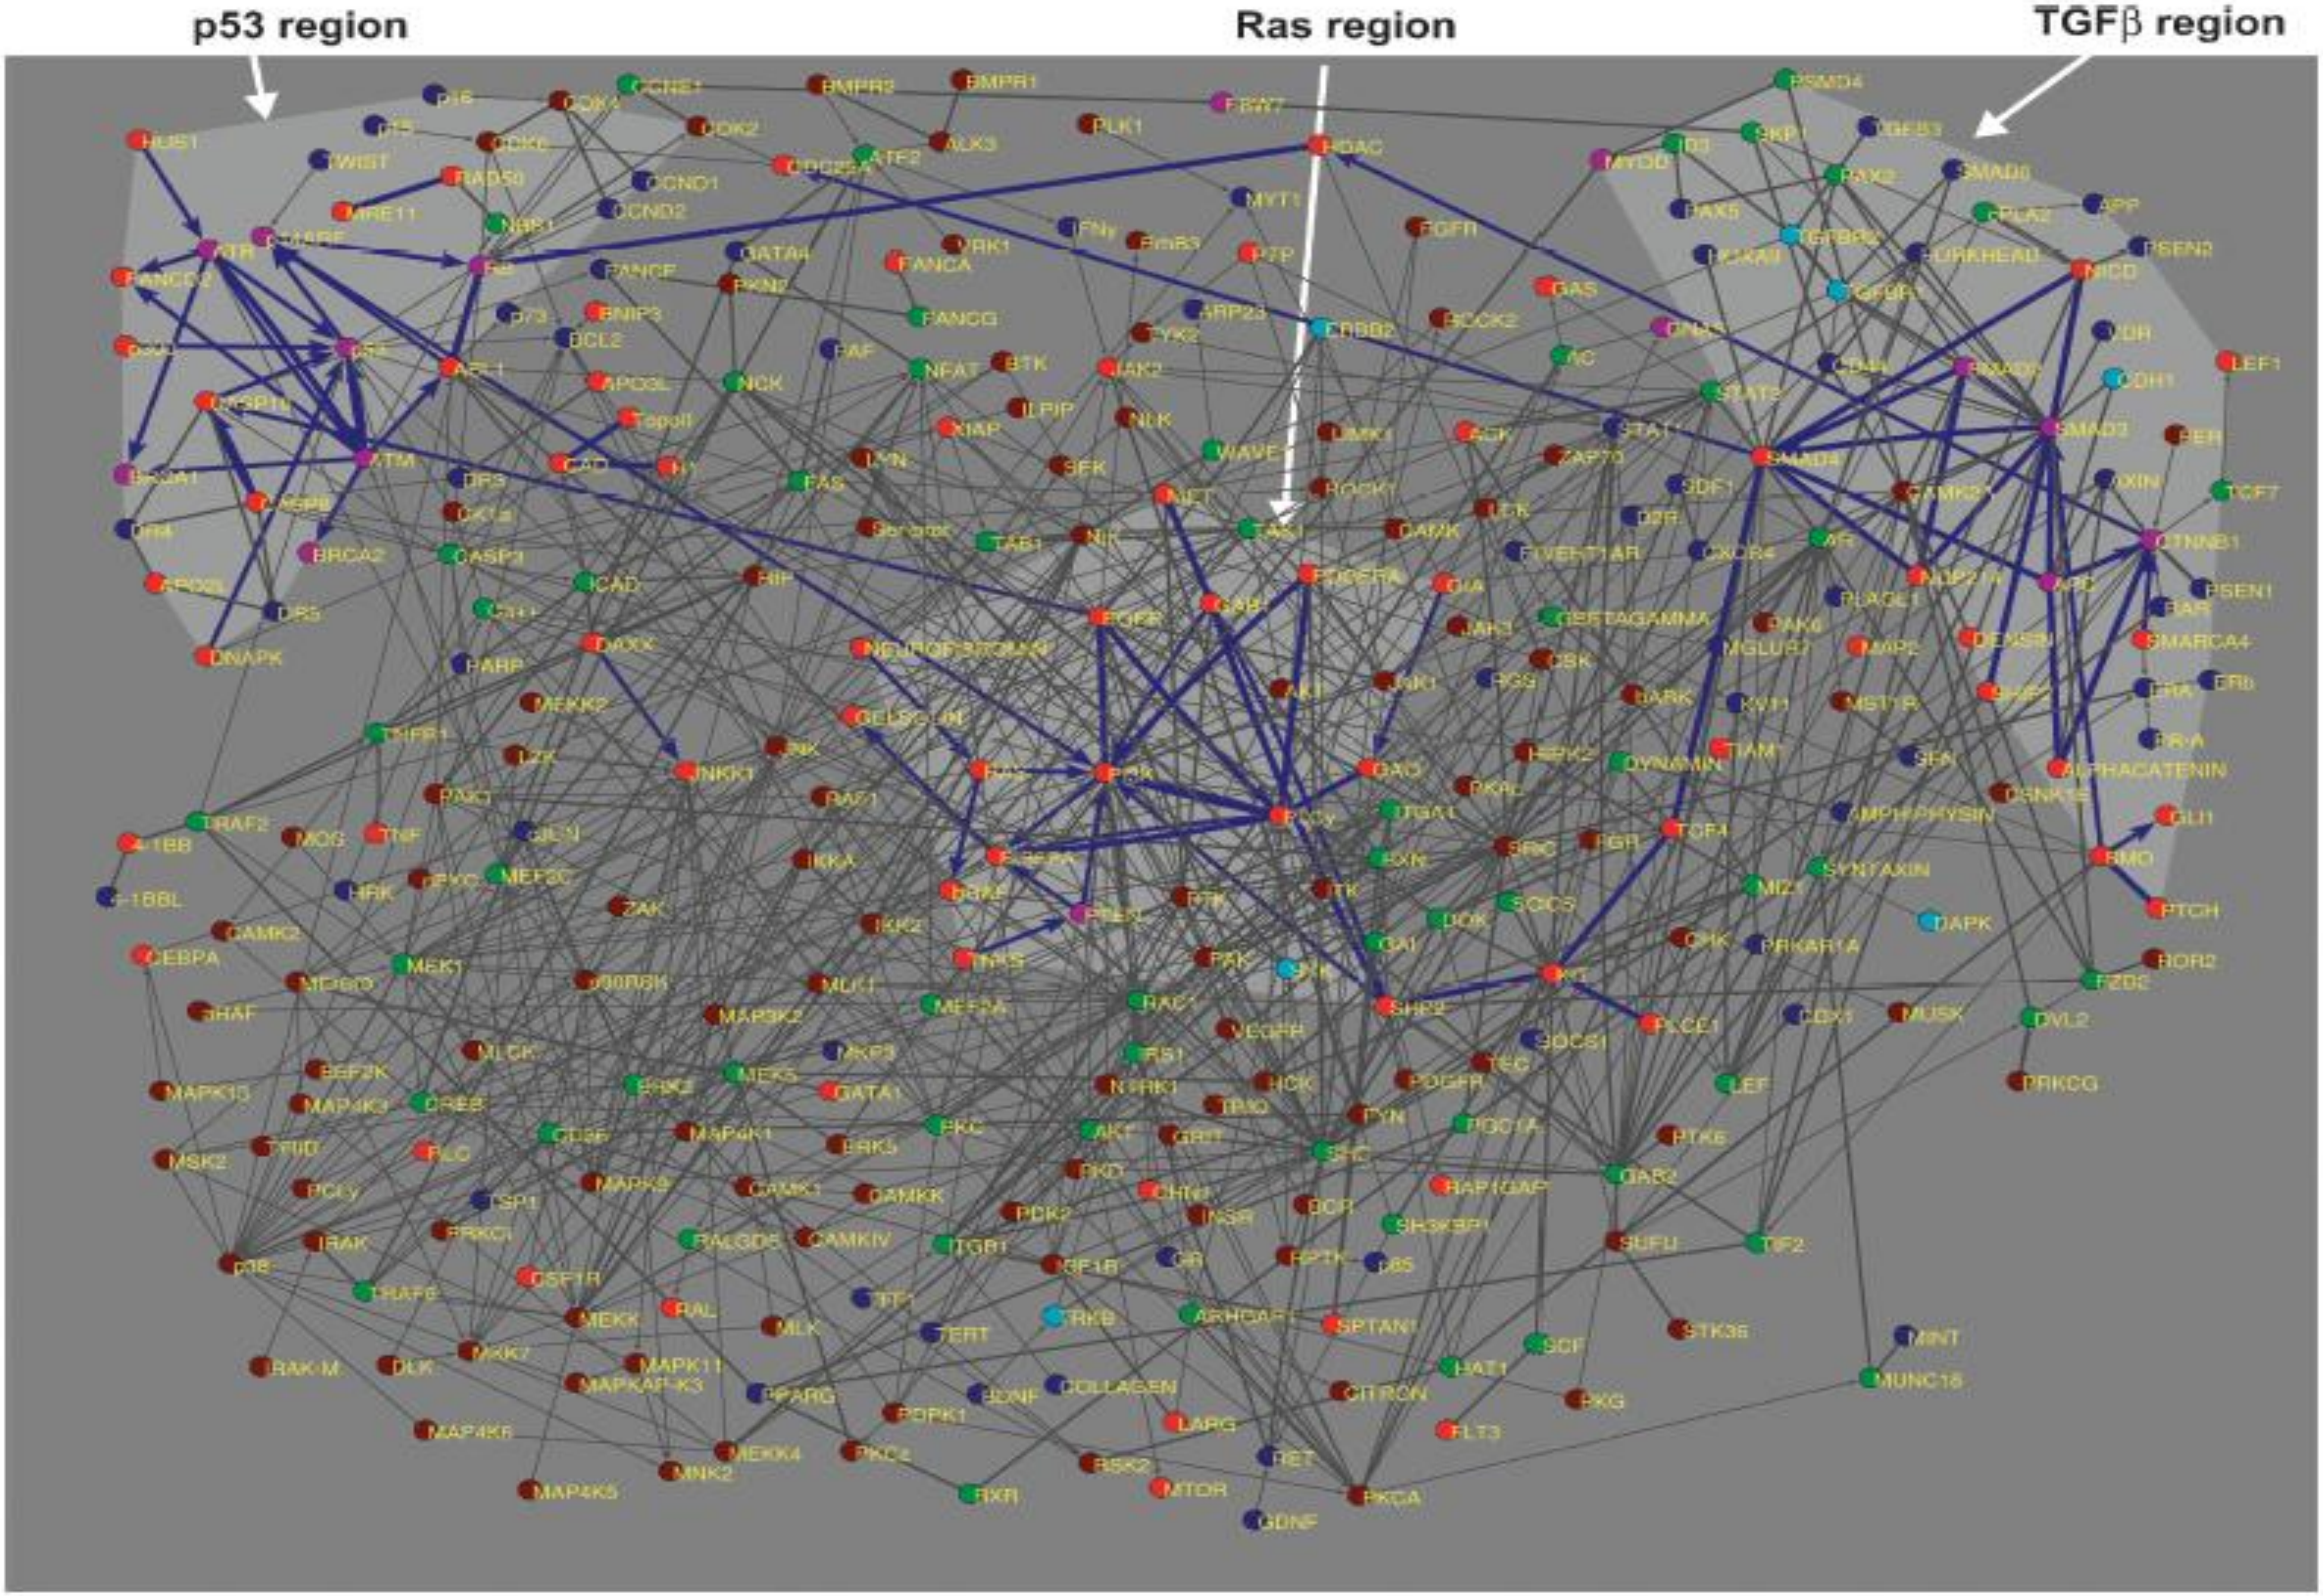


Figure 3 Human oncogene-signaling map. The human cancer-signaling map was extracted from the human signaling network, which was mapped with cancer

Institut de cancérologie
GUSTAVE ROUSSY
VILLEJUIF - www.igr.fr

Duplication of Effort
Fragmentation of Research
No single institute can do it all

- Integration of Basic Research and Clinical Research
- Networks of Clinical and Basic Research Institutes
- **TISSUE AND DATASHARING**

PCM and MELANOMA 2020

STAGE IV remains DRUG DISCOVARY STAGE

- → **Mol Targeted Tx + Immunomodulatory Tx**
- → **Immunogenic Cell Death and Host Immunomodulation**
  - **PRINCIPLES FOR COMBINATION TREATMENTS**
  - **Immunogenic Cell Death and Host Modulation**
  - **Mol Portraits to Guide Resistance Management**
  - **Bioinformatics driven adaptive treatment design**

PCM should bring treatments to less derailed/complex stages of disease

Stage IV is (and may well remain) "too late" for cure

It is the learning platform for PCM interventions in earlier stages of disease

Institut de cancérologie
GUSTAVE ROUSSY
VILLEJUIF - www.igr.fr

NOW WHAT ?

PCM IS NOT A DONE DEAL

Without new biologic insights that lead to simplification of current models and rationalization of drug (combinations) (immunogenic cell death ?) 2020 looks daunting

Institut de cancérologie
GUSTAVE ROUSSY
VILLEJUIF - www.igr.fr

NOW WHAT ?

Life-Sciences and even Medicine will become ”Hard Core Science”

High-Tech advances make us see and create new biologic insights and paradigms

High-Tech investments and Bio-informatics are indispensable

PLATFORMS $$$ MUST BE SHARED

Institut de cancérologie
GUSTAVE ROUSSY
VILLEJUIF - www.igr.fr

NOW WHAT ?

BIG IMPACT

in (small) well defined populations
