Management of brain metastases: Radiotherapy

Dirk De Ruysscher, MD, PhD
Radiation Oncologist
University Hospitals Leuven/ KU Leuven

Disclosure

None

Which patients to treat?

Table 1. Recursive partitioning analysis

		Median survival	1-year OS
Class I:	Age <65 y, KPS \geq 70, controlled primary tumor, no extracranial metastases	7.1 months	30 %
Class II:	All patients not in Class I or III	4.2 months	15 %
Class III:	KPS < 70	2.3 months	5 %

Abbreviation: KPS = Karnofsky Performance Status.

Interim analysis QUARTZ phase III trial: WBRT vs. dexamethason in brain metastases from NSCLC

Characteristic		OSC + WBRT	OSC alone
Gender	Male	45 (60%)	46 (61%)
	Female	30 (40%)	30 (39%)
Recursive partitioning analysis	I	11 (15%)	1 (1%)
	II	28 (37%)	36 (47%)
	III	36 (48%)	39 (51%)

Diagnosis-Specific Graded Prognostic Assessment (DS-GPA)

Non-small-cell and small-cell lung cancer		GPA Scoring Criteria			Patient
Prognostic Factor	0	0.5	1.0	Score	
Age, years	> 60	50-60	< 50	_____	
KPS	< 70	70-80	90-100	_____	
ECM	Present	—	Absent	_____	
No. of BM	> 3	2-3	1	_____	
Sum total				_____	

Median survival (months) by GPA: 0-1.0 = 3.0; 1.5-2.0 = 5.5; 2.5-3.0 = 9.4; 3.5-4.0 = 14.8

NSCLC

SCLC

Early vs. delayed WBRT and concurrent chemotherapy in NSCLC

n = 86

Arm A

* Response Evaluation (after 2-4 or 6 cycles)

- if Objective Response (intracranial and extracranial) } Continue chemotherapy alone 27 %
- if No Objective Response (intracranial and extracranial) } WBRT and stop chemotherapy
- if Intracranial SD or PD (but extracranial objective response) } Chemotherapy and concurrent WBRT

WBRT: 57/86 (66 %) patients

n = 85

Arm B

* Response Evaluation (after 2-4 or 6 cycles)

- if Objective Response } Continue chemotherapy
- if SD or PD } Stop chemotherapy

Early vs. delayed WBRT and concurrent chemotherapy in NSCLC

WBRT plus SRS vs. WBRT: Cochrane review

Outcome: I Overall survival

WBRT plus SRS vs. WBRT: Cochrane review

Outcome: 3 Local tumor control

EORTC 22952-26001 Study

Kocher M et al. J Clin Oncol 20101

Radiosensitive subtypes of NSCLC

Table 2. Absolute recurrence rates by molecular subtype and for tyrosine kinase-activated tumors versus other tumors **after radiosurgery**

	EGFR mutant	ALK translocation	KRAS mutant	Other	ALL
By patient					
In-field	0/21 (0%)	0/9 (0%)	3/17 (18%)	6/32 (19%)	9/79 (11%)
Distant brain	9/21 (43%)	7/9 (78%)	10/17 (59%)	13/32 (41%)	39/79 (49%)
By lesion					
In-field	0/164 (0%)	0/61 (0%)	3/105 (3%)	10/139 (7%)	13/469 (3%)

	Tyrosine kinase-activated	Other	<i>P</i>
By patient			
In-field	0/30 (0%)	9/49 (18%)	0.01
Distant-brain	16/30 (53%)	23/49 (47%)	0.58
By lesion			
In-field	0/225 (0%)	13/244 (5%)	<0.001

EGFR mutation & ALK translocation: more radiosensitive

Clinical data: WBRT + erlotinib

Toxicity

Table 1. Clinical trials of combination of erlotinib with WBRT in brain metastases from NSCLC

Trial	Year	Trial type	N	Treatment	Efficacy outcome	Safety outcomes
Lind et al. ³³	2009	Phase I single arm	11	WBRT:30 Gy/10 f Erlotinib:100 mg/d for four patients; 150 mg/d for seven patients(started 1 week before, and continued during WBRT and then maintenance)	Of seven patients with follow-up imaging,PRs in five and SD in two.	Grade 3–5 toxicities: interstitial lung disease (18%), acneiform rash (9%), fatigue (9%)
Olmez et al. ³⁴	2010	Retrospective analysis	8	WBRT:37.5 Gy/15 f, 40 Gy/20 f or 35 Gy/14 f Erlotinib:150 mg/d varied from 3 weeks to 12 months	Of six patients with follow-up evaluation: PR in three, SD in two and PD in one.	Grade 3–5 toxicities: liver function abnormalities (25%) thrombocytopenia (25%) (25%).
Zhuang et al. ⁴⁸	2012	Phase II study	23	WBRT: 30 Gy /10 f; Erlotinib:150 mg/d till one month after WBRT.	ORR of brain: 95.7%. Median LPFS of brain: 9.0 months. Median PFS: 7.3 months.	Grade 3–5 toxicities: No increase in neurotoxicity.
Welsh et al. ³⁵	2013	Phase II study	40	WBRT: 35 Gy/14f Erlotinib:150 mg/d 1 week before WBRT then concurrently with WBRT and maintenance.	ORR of brain: 86%; Median survival time :11.8 months.	Grade 3–5 toxicities: No increase in neurotoxicity; no patient experienced grade ≥ 4 toxicity, grade 3 rash: 3 patients.

PR: partial response; RR: response rate; RT: radiotherapy; SD: stable disease; ORR: Objective response rate; WBRT: whole-brain radiotherapy.

No increased neurotoxicity

Combination of WBRT & erlotinib is well-tolerated

Conclusions

- Select patients carefully!
- WBRT indicated in symptomatic patients with a life expectancy > 3 months
- In a symptomatic patients, WBRT may be deferred
- SRS superior local control than WBRT
- After SRS: no WBRT, but MRI Q 3 months
- EGFR mutated and ALK +: highly radiosensitive
