

# **Quantifying Post-Neoadjuvant Therapy Residual Disease and its Impact on Relapse Risk**

**W. Fraser Symmans, M.D.**

**Professor of Pathology and Translational Molecular Pathology**

**Director of Research Operations, Department of Pathology**

**UT M.D. Anderson Cancer Center**

# Disclosure

**Nuvera Biosciences, Inc.**  
**co-founder, intellectual property**

# Pathologic Stage (yp) After Neoadjuvant Chemotherapy

## Internal Validation Cohort (MDACC)

## External Validation Cohort (U Mich)

# AJCC Stage of Tumor and Neoadjuvant Treatment

## 7<sup>th</sup> edition, 2010

- Introduced the following specific recommendations:
- Clinical T Stage should be based on the clinical or imaging measurement that is thought to be most accurate
- Postneoadjuvant therapy T Stage should be based on clinical or imaging (ycT) or pathologic findings (ypT)
- Estimate the size of tumors that are unapparent by clinical modalities or gross pathologic examination **by carefully mapping the relative positions of the tissue sections and determining which contain tumor**
- Pathologic (posttreatment) size should be estimated based on the best combination of gross and microscopic histological findings

# AJCC Stage of Tumor and Neoadjuvant Treatment

## 7<sup>th</sup> edition, 2010

- Introduced the following specific recommendations:
- Clinical T Stage should be based on the clinical or imaging measurement that is thought to be most accurate
- Postneoadjuvant therapy T Stage should be based on clinical or imaging (ycT) or pathologic findings (ypT)
- Estimate the size of tumors that are unapparent by clinical modalities or gross pathologic examination by carefully mapping the relative positions of the tissue sections and determining which contain tumor
- Pathologic (posttreatment) size should be **estimated based on the best combination of gross and microscopic** histological findings
- The posttreatment ypT will be **defined as the largest continuous focus of invasive cancer as defined histopathologically** with a subscript to indicate the presence of multiple tumor foci. Note: definition of posttreatment ypT remains controversial and an area in transition

# The Extent Of Residual Cancer Is Variable

# **AJCC Stage of Nodes and Neoadjuvant Treatment**

## **7<sup>th</sup> edition, 2010**

- **Introduced the following specific recommendations:**
- **Add subscript to clinical N Stage to indicate whether N was derived from clinical examination, FNA, core biopsy, or sentinel node biopsy**
- **Posttreatment nodal metastases  $\leq 0.2$  mm are classified as ypN0(i+)**
  - **No patients' outcomes data to support this recommendation**
- **Prone to subjectivity when residual metastasis consists of scattered remaining cells in fibrotic/treatment changes**

# Residual Cancer Burden (RCB)

**Primary Tumor Bed**

**Lymph Nodes**

$$d_{prim} = \sqrt{d_1 d_2}$$

$$f_{inv} = \% \text{ area with invasive CA}$$

*LN = Number of Positive Nodes*

$$d_{met} = \text{size largest metastasis}$$

## DRFS Following Neoadjuvant T/FAC Chemotherapy (N=241)

Variable	Hazard Ratio (95% CI)	P value
Primary tumor bed size ( $d_{prim}$ )	1.24 (1.04-1.48)	0.02
Fraction of invasive cancer ( $f_{inv}$ )	7.37 (2.16-25.1)	0.001
Number of positive lymph nodes ( $LN$ )	1.11 (1.04-1.19)	0.002
Size of largest metastasis ( $d_{met}$ )	1.17 (0.99-1.38)	0.06

# Pathologic Assessment Of The Primary Tumor Bed

**Breast Cancer**

## Residual Cancer Burden Calculator

**(1) Primary Tumor Bed**

Primary Tumor Bed Area:  (mm) X  (mm)

Overall Cancer Cellularity (as percentage of area):  (%)

Percentage of Cancer That Is *in situ* Disease:  (%)

**(2) Lymph Nodes**

Number of Positive Lymph Nodes:

Diameter of Largest Metastasis:  (mm)

Residual Cancer Burden:

Residual Cancer Burden Class:

# Summary

- Record pretreatment cStage from clinical records
- Record pretreatment phenotype and grade
- pCR
  - pCR in breast and nodes
  - Report presence and extent of in situ residual disease
- Require standardized procedures to evaluate the gross specimen, record a map of the tissue sections related to the gross & imaging findings, and relate the histopathologic findings to that map
  - Multidisciplinary teamwork from surgeons, radiologists, and pathologists
- Then it becomes very easy to interpret and report
  - ypT Stage defined by largest continuous extent of invasive cancer
  - RCB from the dimensions and cellularity of primary tumor bed
  - Multifocality
