Adoptive Cell Transfer (ACT)

John Haanen

NETHERLANDS CANCER INSTITUTE
ANTONI VAN LEEUWENHOEK

Aim of this presentation

- Basic aspects of ACT
- How does it work and how well does it work?
- Is there still a place for ACT in the era of checkpoint inhibitors?

NETHERLANDS CANCER INSTITUTE
ANTONI VAN LEEUWENHOEK

What is ACT?

- Infusion of an immune cell product with the aim to induce or augment an anti-tumor immune response

NETHERLANDS CANCER INSTITUTE
ANTONI VAN LEEUWENHOEK

Which cells are transferred?

- Mostly CD3+ T cells
  - Tumor-infiltrating lymphocytes
  - Antigen-receptor gene modified T cells (blood derived)
    - TCR gene modified T cells
    - Chimeric antigen receptor (CAR) gene modified T cells
  - T cell clones/lines (oligoclonal population) from blood
- Other cell types: NK cells, DC

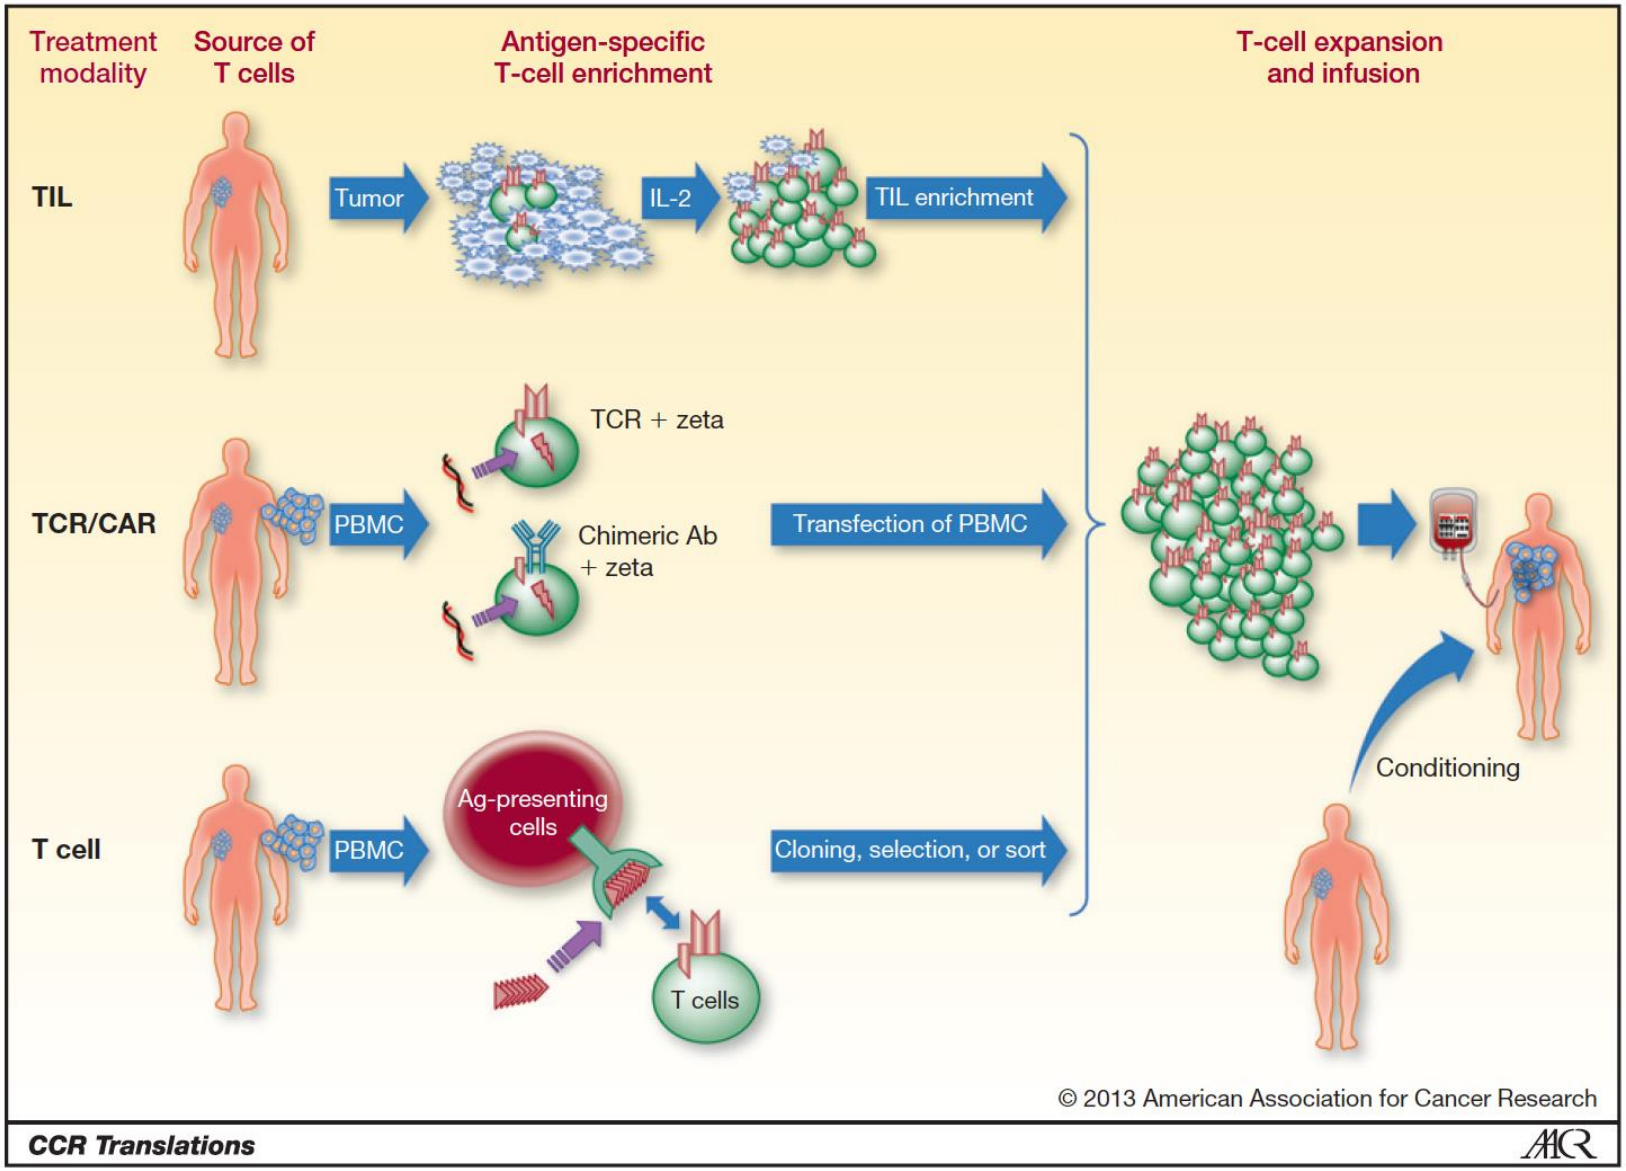
NETHERLANDS CANCER INSTITUTE
ANTONI VAN LEEUWENHOEK

How does ACT work?

How effective is ACT?

NETHERLANDS CANCER INSTITUTE
ANTONI VAN LEEUWENHOEK

ACT with CD3+ T lymphocytes



Yee C Clin Cancer Res 2013

How effective is ACT?

- Infusion of peripheral blood derived T cells
- Infusion of TCR gene modified T cells
- Infusion of TIL

BRIEF REPORT

Treatment of Metastatic Melanoma with Autologous CD4+ T Cells against NY-ESO-1

Naomi N. Hunder, M.D., Herschel Wallen, M.D., Jianhong Cao, Ph.D., Deborah W. Hendricks, B.Sc., John Z. Reilly, B.Sc., Rebecca Rodmyre, B.Sc., Achim Jungbluth, M.D., Sacha Gnjatic, Ph.D., John A. Thompson, M.D., and Cassian Yee, M.D.

NETHERLANDS CANCER INSTITUTE
ANTONI VAN LEEUWENHOEK

Conclusion

- Infusion of peripheral blood derived melanoma-specific T cells is feasible
- Time consuming (4-16 weeks)
- Few but sometimes lasting responses are seen
- How to improve?
  - Are we targeting the right antigens?
  - Are we infusing the right T cells?
  - Combination therapy?

NETHERLANDS CANCER INSTITUTE
ANTONI VAN LEEUWENHOEK

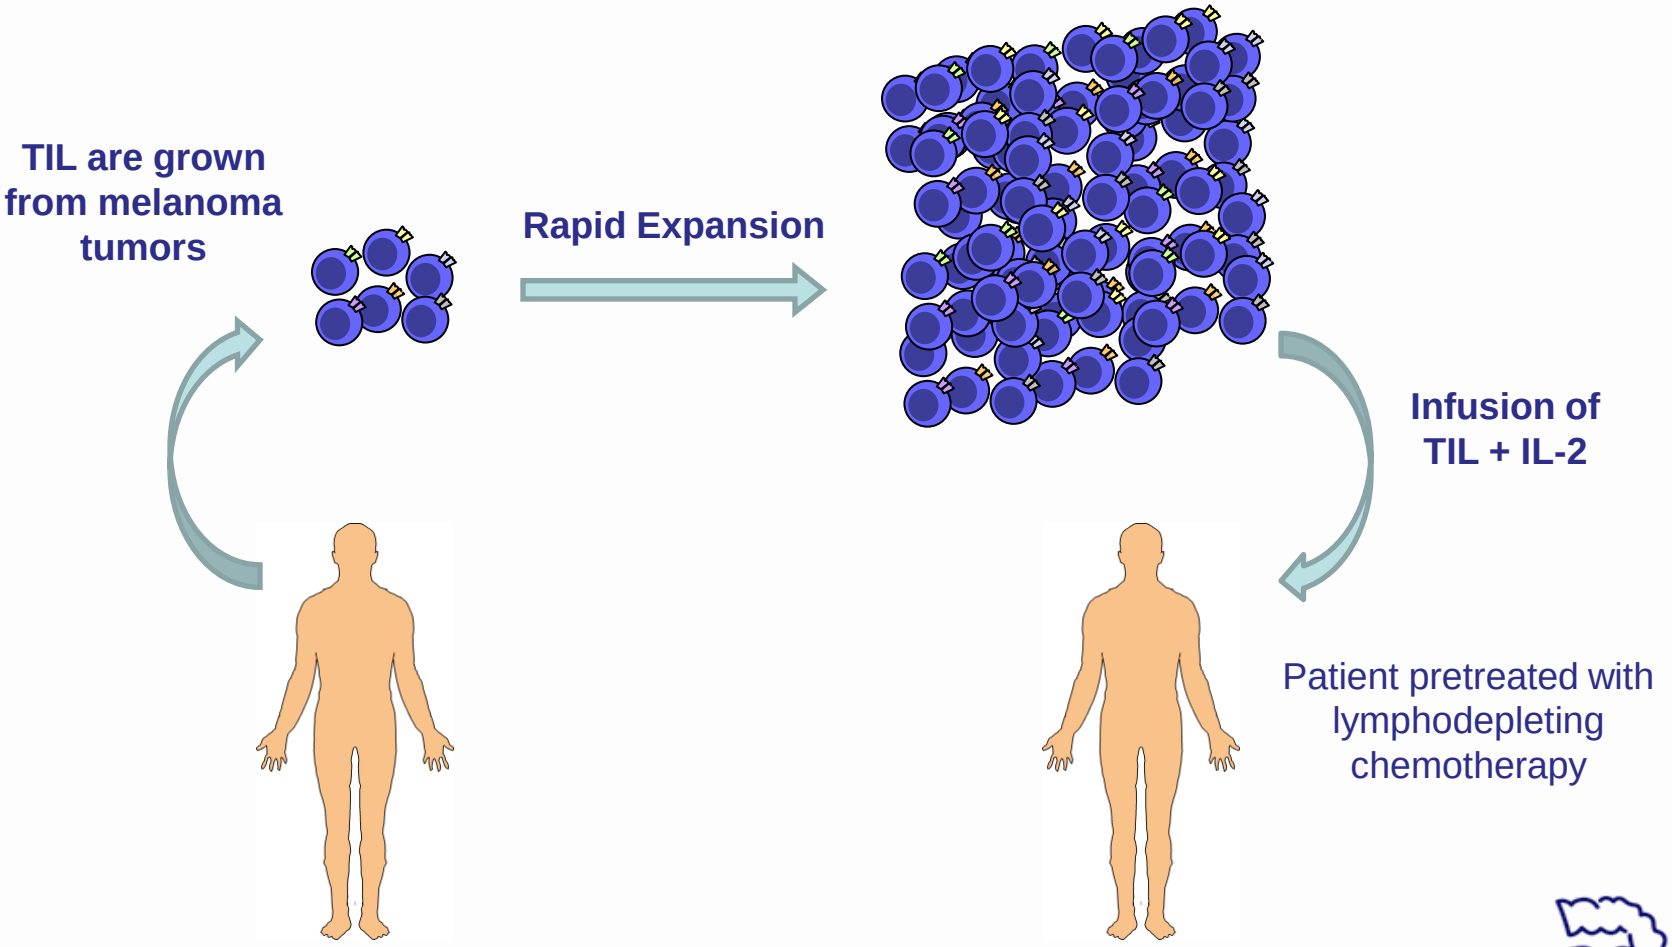
Robbins et al., J Clin Oncol 2011

Conclusion

- Infusion of TCR gene modified T cells is feasible and can result in objective responses
- Infused T cell can persist for months
- Can be very toxic!
- Finding the right target is key
- Is one target enough?
- How to improve?
  - Combination with other IT?

NETHERLANDS CANCER INSTITUTE
ANTONI VAN LEEUWENHOEK

Infusion of tumor Infiltrating Lymphocytes



- High response rate in phase II trials in multiple centers (US, Israel, NL, UK, DK)
- Clinical effect at least partially mediated by CD8 T cells

NETHERLANDS CANCER INSTITUTE
ANTONI VAN LEEUWENHOEK

Clinical data N10TIL003: ongoing CR at 24 months

Prior to TIL | 3 wks post TIL | 8 wks post TIL | 12 wks post TIL

Biopsy at wk 7 showed no viable tumor cells

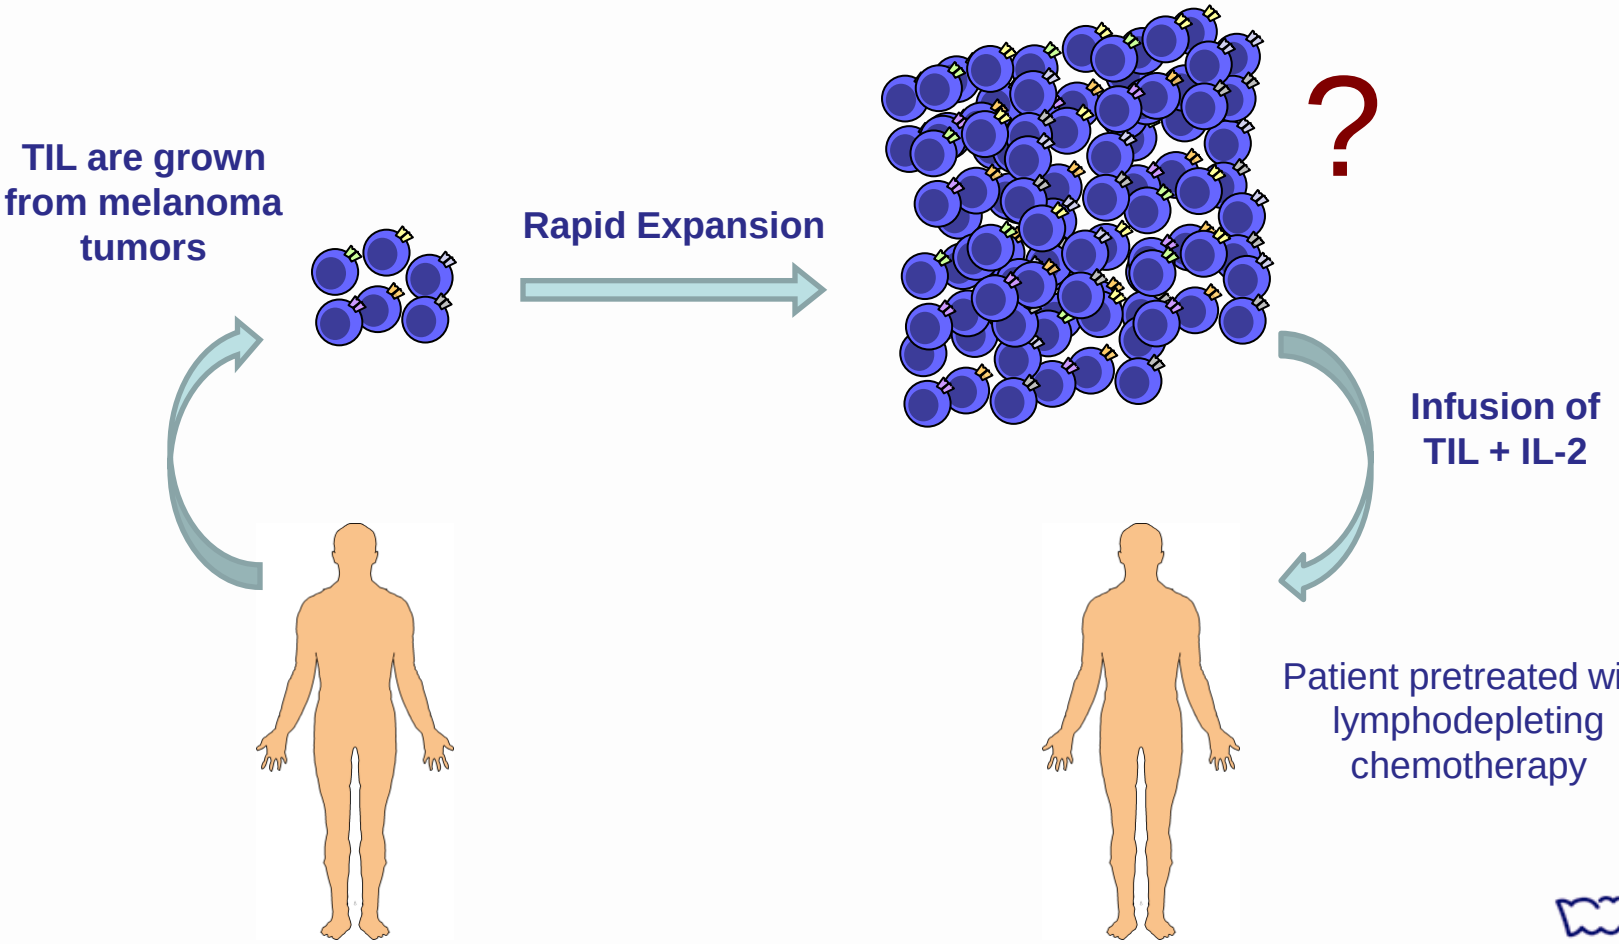
NETHERLANDS CANCER INSTITUTE
ANTONI VAN LEEUWENHOEK

TIL therapy

- > 300 metastatic melanoma patients have been treated world wide in at least 8 centers
- Objective responses observed in 38-72% of treated patients
- In ITT analysis (n=80): ORR 29%
- Median survival of treated patients: ± 16 m
- Long-term CRs

NETHERLANDS CANCER INSTITUTE
ANTONI VAN LEEUWENHOEK

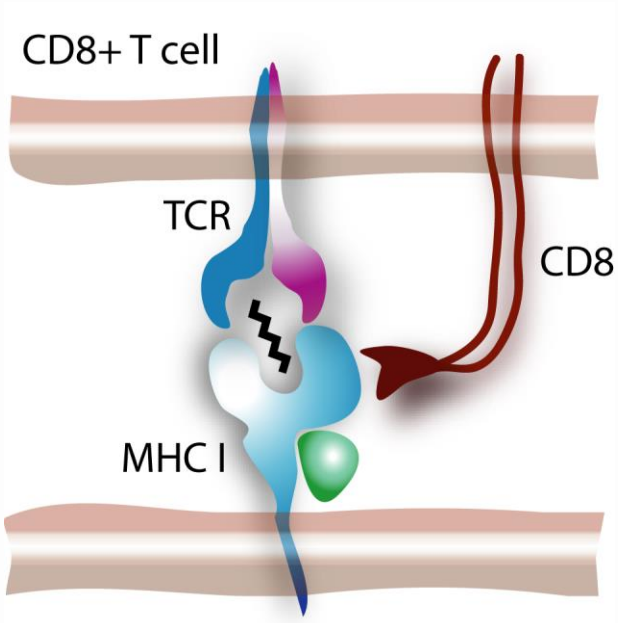
The big unknown



- Which cytotoxic T cells mediate cancer regression?
- Could we specifically boost their numbers?

NETHERLANDS CANCER INSTITUTE
ANTONI VAN LEEUWENHOEK

What could tumor-specific cytotoxic T cells detect on human cancer?



1. Self antigens (to which tolerance is incomplete)
   Shared between patients

2. 'Neo-antigens', epitopes that arise as a consequence of tumor-specific mutations
   In large part patient-specific, hence generally ignored

NETHERLANDS CANCER INSTITUTE
ANTONI VAN LEEUWENHOEK

TILs against shared tumor antigens

- In the majority of TILs T cells specific for shared antigens can be found
  - Melanocyte differentiation Ags (Mart-1, gp100, etc)
  - Cancer/Testis gene products (NY-eso-1, MAGE, SSX-2, etc
  - Overexpressed Ags (Meloe etc.)
- Low frequency (mostly below 1%)
- No correlation with response

NETHERLANDS CANCER INSTITUTE

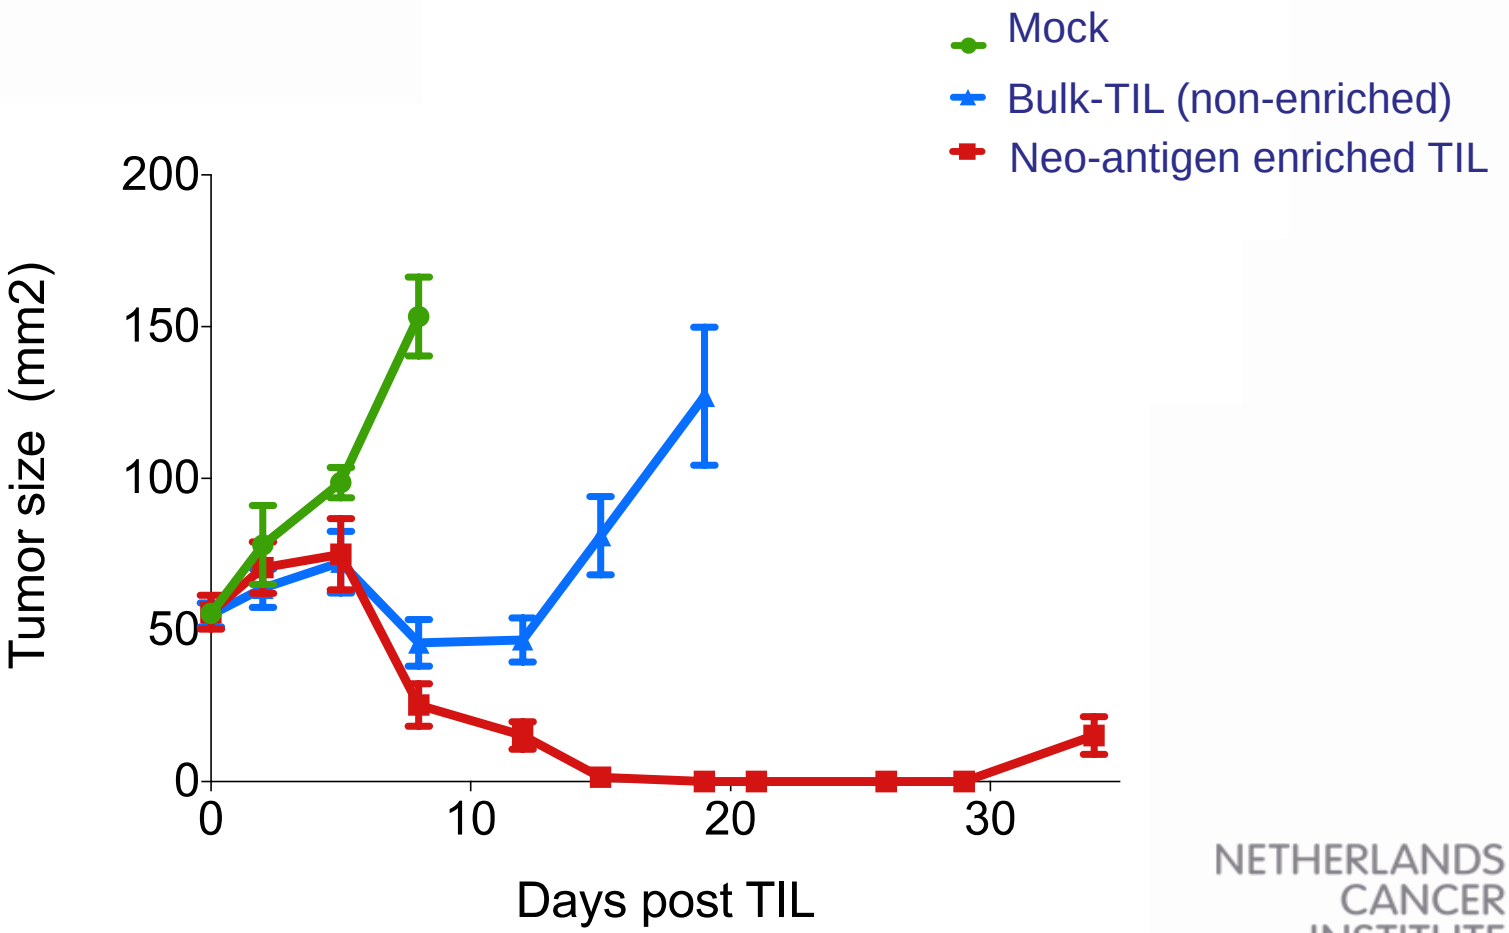
Neo-antigen enriched TIL can mediate superior tumor control



NETHERLANDS CANCER INSTITUTE
ANTONI VAN LEEUWENHOEK

Conclusion

- TIL infusion is feasible and can result in objective responses including durable CRs
- Neo-antigen-specific T cells are present in the majority of melanoma TIL
- Neo-antigen specific TIL play a (superior) role in tumor rejection

NETHERLANDS CANCER INSTITUTE
ANTONI VAN LEEUWENHOEK

Is there a place for ACT in the immune checkpoint blockade era?

- Unresolved Q:
  - We need a RCT comparing TIL with standard of care
  - Can TIL be combined with checkpoint inhibitors? (anti-PD1)
  - Can TIL be improved by selection of tumor-reactive T cells (CD137 or PD1 enrichment)
  - Can TIL be improved by knock-down of PD1 or Ppp2r2d?
  - Can we boost the neo-antigen specific cells by vaccines?

Taking the next step for TIL based ACT

Randomized phase III study comparing TIL based ACT to standard ipilimumab treatment in metastatic melanoma

To obtain EMA approval of ‘classical’ TIL therapy as an ATMP

NETHERLANDS CANCER INSTITUTE
ANTONI VAN LEEUWENHOEK

TIL preparation harmonization procedure

- Three different production sites at blood supply units
- Establishment of uniform production methods and common SOP
- Validation procedure finalized

Procedure and procotol approved by

VHP European Committee

NETHERLANDS CANCER INSTITUTE
ANTONI VAN LEEUWENHOEK

Study design

Patients: 168 patients with metastatic (stage IV) melanoma and a resectable metastasis will be randomized 1:1 between arm A, standard treatment (ipilimumab) and arm B, TIL treatment.

Arm A: standard ipilimumab (3 mg/kg x 1 day i.v., q3w, 4 treatments).

Arm B: non-myeloablative chemotherapy (cyclophosphamide 60 mg/kg/day x 2 days i.v., fludarabine 25 mg/m^2/day x 5 days i.v.) followed by intravenous adoptive transfer of at least 5 x 10^9 TIL followed by high dose interleukin-2 (600.000 IU/kg/dose every 8 hours for up to 15 doses).

Stratification: Patients will be stratified for BRAF V600 mutation, 1st or 2nd line treatment, and treatment center

Study endpoint

Primary endpoint: PFS at 6 months by RECIST 1.1

Secondary endpoints:

- PFS according to RECIST 1.1 and irRC.
- ORR according RECIST 1.1 and irRC
- CR rate
- Overall survival
- Safety
- Constructive technology assessment (CTA) will be performed to evaluate the impact on patient, organizational and economic consequences
